3. SOURCE Civilian	10. CONCLUSION Astronomical (SPICA)
4. NUMBER OF OBJECTS One	
5. LENGTH OF OBSERVATION 1 Hour	11. BRIEF SUMMARY AND ANALYSIS Object like a star moving at great speeds with sudden stops. Appeared in West always moving to East or SE. Erratic flight path. Observed on four different occasions. CONCLUSION: Both SPICA and ARCTURUS in the West at the time of sighting. Motion of one of these astro bodies distorted by atmospheric conditions and/or illusion could be interpreted to have been the cause of the sighting. Since the bodies were in the West any motion attributed as toward the observer would be interpreted to be in flight to the East. Sighting characteristics of an astronomical observation of stars/planet SPICA disappears about 2200 and is most likely cause.
