1. DATE - TIME GROUP 22 May 1965 22/1355Z	**2. LOCATION** Albuquerque, New Mexico
3. SOURCE Civilian	**10. CONCLUSION** AIRCRAFT
4. NUMBER OF OBJECTS 6 Lights	
5. LENGTH OF OBSERVATION 30 Seconds	**11. BRIEF SUMMARY AND ANALYSIS** 6 lights, oval, small in diagonal or wedge formation, appeared to be luminous travelling from East to West then turning back to NE. Objects travelling at high speed. Changed formation once x and had no specific pattern as they change direction to the NE. Night was overcast objects (lights) appeared to be above a a scattered cloud deck.
6. TYPE OF OBSERVATION Ground-Visual	
7. COURSE West then NE	
8. PHOTOS ☐ Yes ☒ No	COMMENTS: 6 lights confined to small area. Maybe one or more a/c Local traffic eliminated as source. Possible a/c from other area. Flight path indicates directional change to Santa Fe or Las Vegas direction. Observation brief (30 seconds) but long enough for a/c observation of the nature. Also observation occured in overcast WX and some obscuration likely occured due to clouds and haze. Case regarded as an a/c observation of one or more aircraft.
9. PHYSICAL EVIDENCE ☐ Yes ☒ No

Rec from Dr. H 20 Sept 68

22/May/65

Mar. 24, 1966

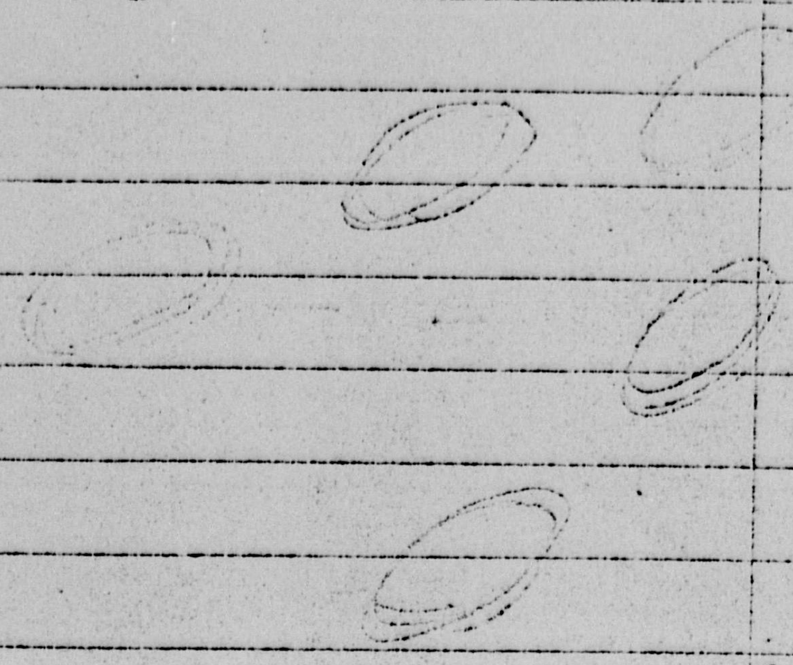
Dear Mr. Haynes

I am answering your letter in regards to our report of the U.F.O. on May 22, 1965.

1. At the time of our observation there were no stars visible. The sky was overcast. The objects were different from a star in that they were egg shaped & did not twinkle or shined, but glowed from within. They flew in a V shaped formation & broke this formation only to almost halt, make a turn, & head more northeast.

2. The objects covered only a small portion of the sky as if there was maybe 5 large airplanes flying together in formation. About the same area would have been covered. There was no sound whatsoever. However the sky was overcast & we could not decide if the objects were very large & far away or if they were small (smaller) & [illegible]

This is an illustration of the objects as they passed directly over our heads.



There seemed to be between 5 to 7 but they passed so quickly we could not be sure. They all seemed approximately the same size & shape but again we couldn't be positive. Their glow was not bright but very dim.

3. Since the observation, no solution has entered our minds. We are positive they were not planes because we had seen one South of us about the same time (seconds earlier.) We watched these objects for about 30 seconds from

the lines they approached was met of the western sky until they went out of sight northeast of us. We were all laying on lounge chairs on our patio & were looking into the sky as we talked. It was completely dark as we probably would not have seen them.

4. We have not witnessed anything similar to the event before or since.

We are glad to be of assistance to you. If there are further questions we will be glad to help. The people that were here at the time feel the same. They were: Mr + Mrs. [redacted] 56th N.W. Albuq. N.Mex.

By the way our name was spelled wrong. I believe they meant [redacted] and wife instead of [redacted].

Sincerely
Mrs. [redacted]

[redacted]

Clay Horn.
