A/C

Dear Sir; August 13, 1965

I am writing you the letter on the advice of a newsman of a local radio station. Last night, August 12, at 11:04 p.M. two (2) unidentified flying objects flew over my area. They flew from East South East to West North West at an altitude of about 7,000 feet. The objects flew in a single formation of one in back of the other. They each had five lights, one of which was a bright yellow, the other were white. There were no engine sounds from them from the time we first saw them untill we lost sight of them. I say we because there were four (4) other people who saw them besides myself. Their names are listed below. I have been studying astronomy for almost eight (8) years now, and I pretty sure I can tell a plane or a meteorite or a satellite when I see one, and I'm positive that these objects

were none of them. I have called my local Air National Guard and airport and the Quonset Point Naval Air Station. None of them had any flights in the air at the time of our sighting. I saw the objects through my telescope. It is a 120 power one. Behind the lights I could make out a gray shadow in a shape of a disk, all the lights were connected to this body. I'm writing you this letter in the hopes that it might change your view on flying saucers and you'll do a little bit more than sit behind a desk and say that all these sightings are planets and stars.

Sincerely yours
