Mrs. ~~XXXX~~ told me that she didn't make a report on the first one that passed. It was seen by her first, since I was facing south. It went over some twenty minutes before the others. We watched it and wondered about it, but did not report it. Then at 5:45 we saw the second one. The rest came at intervals and all appeared in the same place and disappeared at almost the same place. They all followed the same course in my opinion.

It is impossible to accurately even guess the answer to question 20 without basis of size or distance or something to start on. They moved much faster than the lights of planes we are accustomed to seeing. The most accurate example I can give of how they appeared to me is as of a light reflection traveling along a power wire, but there were no wires there.
