COUNTRY Puerto Rico	REPORT NO. IR-178-53	(LEAVE BLANK)
AIR INTELLIGENCE INFORMATION REPORT		
SUBJECT Unidentified Object		
AREA REPORTED ON Puerto Rico	FROM (Agency) Wing Intelligence, 72nd SRW, Ramey AFB, PR	
DATE OF REPORT 3 Jan 53	DATE OF INFORMATION 31 Dec 52	EVALUATION A-1
PREPARED BY (Officer) BRADFORD P SHUMAN, MAJOR, USAF	SOURCE Air Crew of RB-36 #2007	
REFERENCES (Control number, directive, previous report, etc., as applicable)		

A certified true copy of the report rendered by each of the three aircraft personnel
SUMMARY: (Enter concise summary of report. Give significance in final one-sentence paragraph. List inclosures at lower left. Begin text of report on AF Form 112—Part II.)

On the morning of 31 Dec 52, at approximately 0445 hrs., an Aircraft Commander, First Pilot, and left scanner of an RB-36 #2007 sighted and closely observed an unidentified object until the time of its disappearance, at approximately 0450 hrs.. During the time of sighting the object, it was noticed by the Aircraft Commander and the First Pilot that they were flying an outbound heading of 073 degrees from the radio beacon at Ramey and were at an altitude of 8,000 feet. As verified by the above mentioned personnel it was a clear, moonlit night and, for the time of night the sighting was made, visibility was excellent.

Both aircraft Officers concur that the object was spherical in shape. The left scanner corroborates the statement of the Aircraft Commander and First Pilot that the object appeared as a reddish-orange ball of flame. The object appeared on the horizon, was seen to approach the aircraft to the left, pass over the left wing at a distance of approximately three hundred (300) feet or greater, travel away from the tail of the aircraft at a high rate of speed, and then commence to climb until out of sight.

Comments of Preparing Officer:

If any information is available regarding the nature or origin of this object it is requested that this office be advised. No programmed missile lanes are scheduled to be in this immediate vicinity. The close proximity of the reported object presents a serious flying hazard. Any knowledge or opinions offering a solution to this sighting will be helpful.

DOWNGRADED AT 3 YEAR INTERVALS:
DECLASSIFIED AFTER 12 YEARS.

CERTIFICATE

The following statement is true and correct to the best of my knowledge and belief:

Approximately 0450 hours on the morning of 31 December 1952, while flying routine training mission in RB-36 #2007, I saw the following described object:

I was flying the airplane on instruments from the left pilot seat. Captain Gammage was sitting in the right pilot seat. Captain Gammage called my attention to a bright orange light out the front side to the left. I looked out just in time to see an orange colored ball of flame about 6 feet in diameter pass in the opposite direction high and to the left.

We were flying an IFR problem and was on an outbound heading of approximately 73 degrees.

CERTIFICATE

The following statement is true and correct to the best of my knowledge and belief:

At 0115 hours on 31 December 1957, Aircraft #2007 was flying on a heading of 075 degrees from the radio beacon, altitude 8000 feet. At that time the Aircraft Commander noticed what appeared to be a star just above the horizon. At approximately 0450 hours the object came closer and passed about 200 feet above the aircraft and just over the left wing.

The object appeared to be a ball of fire approximately 8 x 10 feet in diameter, traveling at very high speed. In color it was a reddish-orange.

Immediately after the object passed the nose of the aircraft, the Aircraft Commander called the left gunner and asked if he had seen the same object. He immediately left the left gunner's position and reported that he saw the object traveling away from the tail of the aircraft and after a short period started climbing. A written report on his signature will be rendered by the gunner and the First Pilot.

The weather was clear and the moon was shining very bright and any aircraft would have been very easy to distinguish. It was not a conventional or a jet aircraft.

CERTIFICATE

The following statement is true and correct to the best of my knowledge and belief:

At about 0450 hours on 31 December 1952, the Aircraft Commander on Ship # 007 called me (acting as look scanner) and asked if I saw the reddish orange object that passed over our last range heading from 12 o'clock to 6 o'clock. At the time I did not see or believe it and to verify that the two pilots saw I left the lower left blister and went to the upper left air blister and directly behind our aircraft at a distance unknown was a large reddish orange object which moved over to the right and began to climb sharply at a high rate of speed. I watched the object until it was out of sight.

At the time we were flying straight and level and it could not have been mistaken for a low star on the horizon. It was a very clear moonlit night.
