1. Sighting was not reported in local newspapers
2. Although there are several million people in New York, the object would not have been noticed unless someone glanced at the sky at the right moment. I happened to glance up to see if the sky was clear of clouds in an effort to judge the next days weather.

There was no one else in the same block with me, how many other people were on other blocks in the neighborhood, I have no way of knowing.

3. As I glanced away from the sky the object appeared.

My first impression was an airplane - but the light didn't wink on and off.

My 2nd impression was a meteor - similar to that seen in profusion in the fall - and occasionally at other times of the year. Of these I have seen many.

However, almost instantly the object reached its full size and started off on an apparent horizontal course.

At this time I decided that I had never seen a meteor that had the following characteristics.

- ① - Left no visible trail.
- ② - Became large and changed color.
- ③ - Such a low altitude - definite line of demarcation between object and stars.
- ④ - Traveled so slowly -
- ⑤ - Any other meteors seen were star sized, appeared very far away, seemed to leave a trail behind.

4. The colors changed as follows -

- ① pinpoint of light similar to star of first magnitude -
- ② - almost instantly, was large - circle - yellow in color
- ③ - about half way thru path was bright white with dark center - tear drop shape -
- ④ - at end of path was ellipsoidal shape with definite dark (almost black) circle or spherical center and orange colored surrounding envelope -
- ⑤ - appeared slightly smaller and went out -

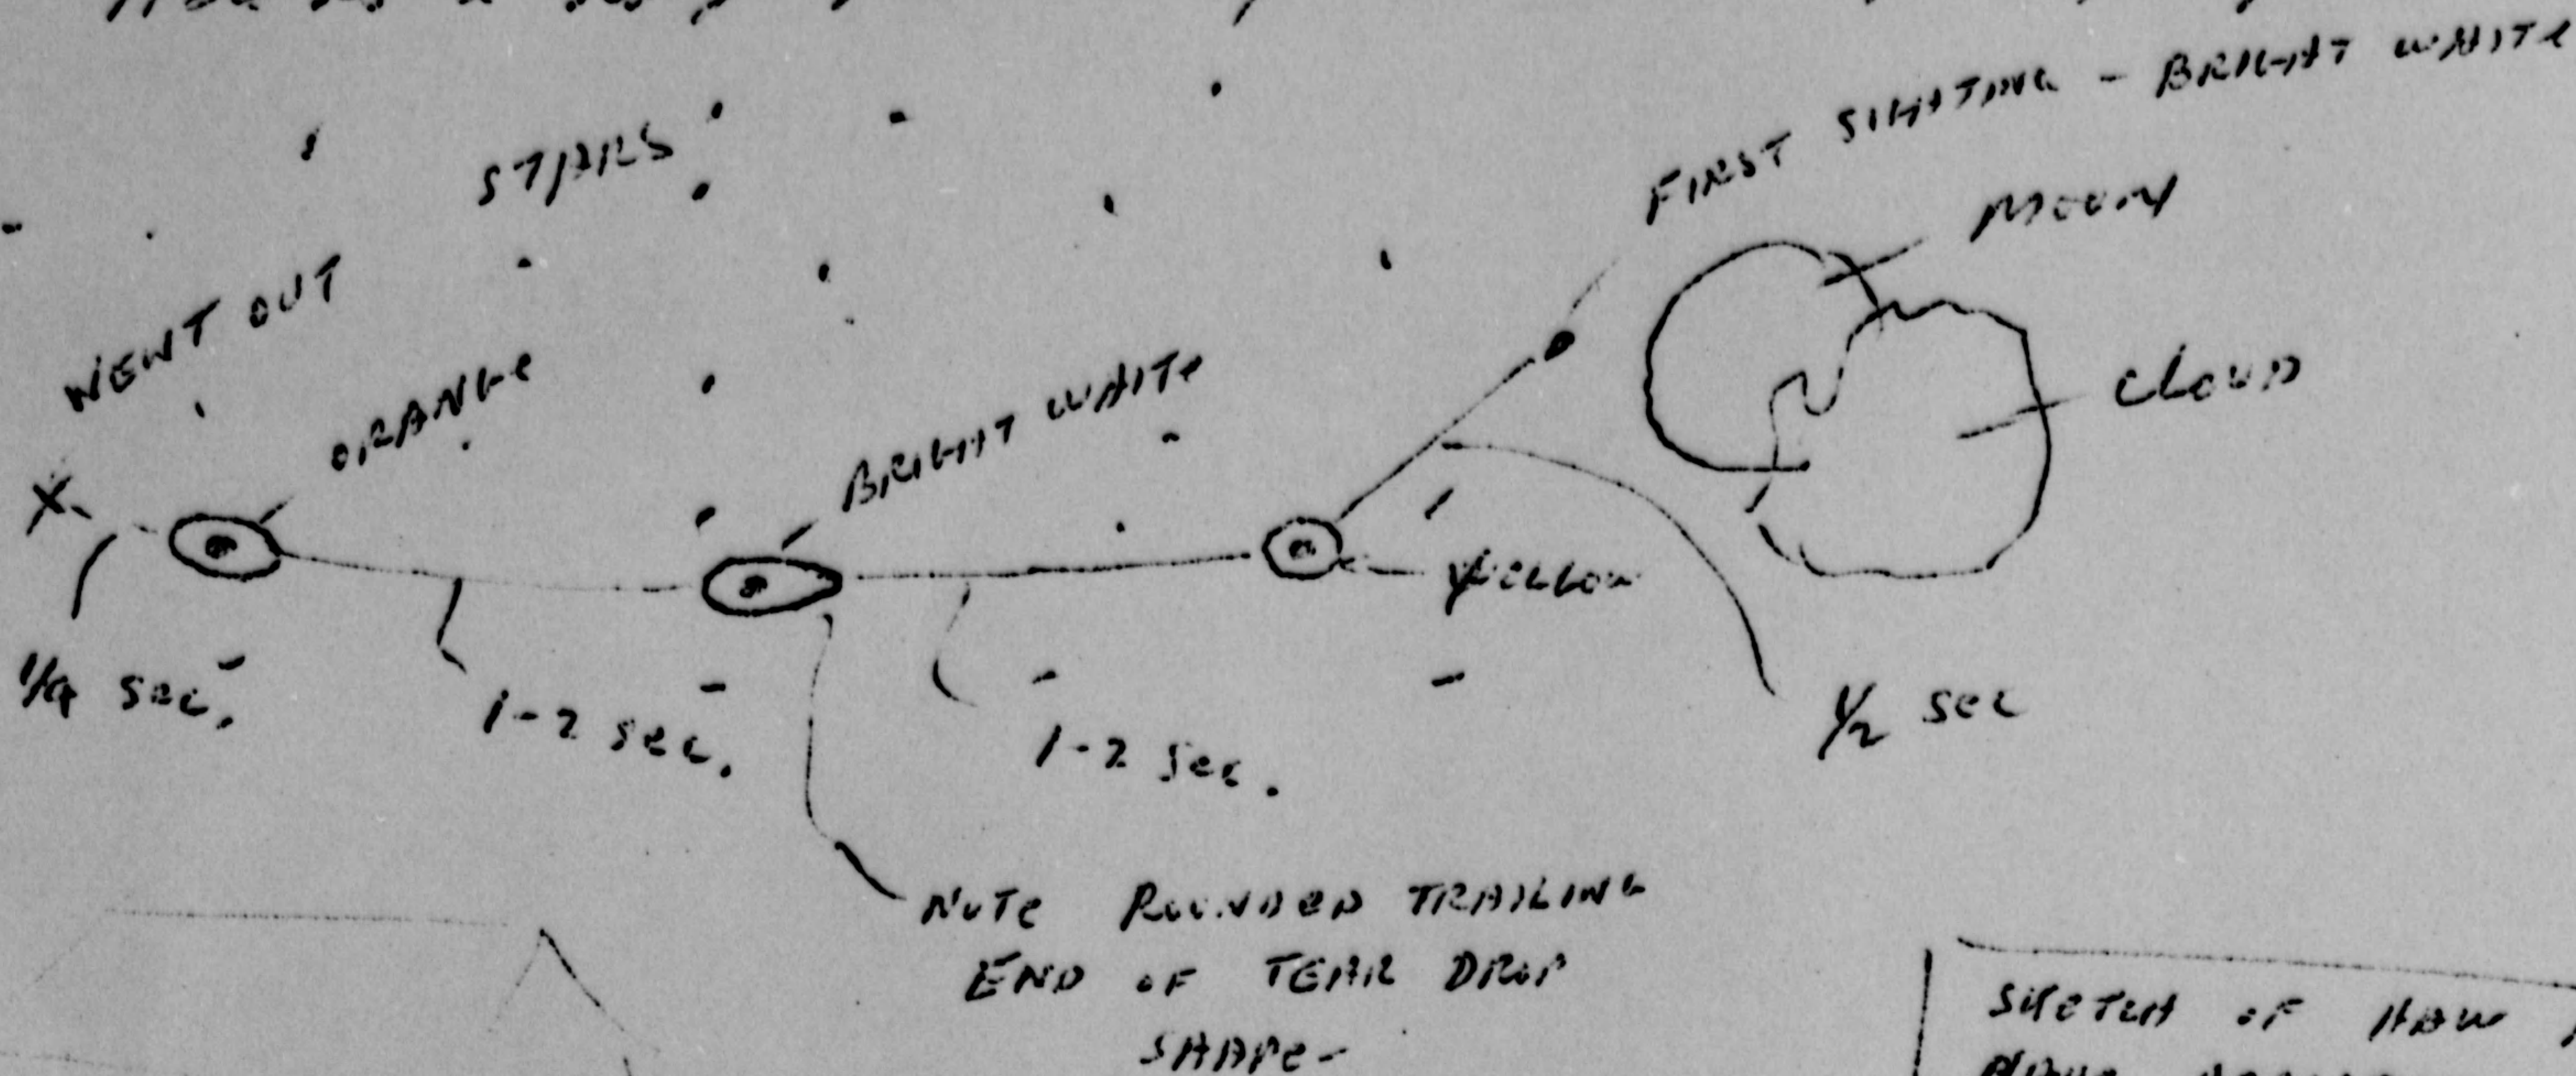

5. - The object was not one of the following familiar objects -

- (1) airplane - running lights or exhaust.
- (2) search light - there were no low hanging clouds or beam of light to the object
- (3) Reflection or refraction of automobile head lights - again sky too clear and object seemed too low.
- (4) Meteor - as mentioned before did not resemble any previously or later seen.
- (5) after burner of a jet - speed appeared too low - no sound at any time - before, during or after sighting - The sky background was clear enough to observe any dark outlines of a low flying plane -

6. The apparent change in course could be an error because the time from the first sighting of a pinpoint of light to full size were very short maybe  $\frac{1}{2}$  sec. or it could be due to object coming in perpendicular to my line of ~~the~~ sight and making a right angle bank - revealing a bottom of a disc shaped object - which as it proceeded along its course leveled out more and more causing it to take on its final ellipsoidal shape - and finally turning on edge to disappear -

Here is a rough sketch of how the sighting appeared

SKETCH OF HOW METEORS  
HAVE APPEARED TO ME  
ON OTHER OCCASIONS

NOTE - THE OBJECT IS SHOWN HERE APPROXIMATELY  
FULL SIZE AS IT APPEARED TO ME.

As far as speed went its estimate of 150-200 mph is merely a guess - assuming that it was similar in size and altitude (500 ft) to an airliner.

As for distance - it could have been 2000 or 120,000 feet as it was impossible to judge the size against the back ground of stars.

Object appeared to be traveling in a SW or SSW course headed towards Jamaica Bay in the vicinity of Rockaway Point.
