ATIC Comment:

1. A check with balloon schedule show one was released at New York area just prior to sighting.
2. The wind directions given would move the object in direction reported by observer.
3. It has repeatedly been proven that when balloons are sighted at dawn or dusk, they will look red, orange, etc. The sun was down far enough for the observer to see it, but the balloon was high enough to pick up its rays. BALLOON

## Northern Lights Give Bright, Colorful Show

Shimmering arcs and fiery curtains of red, green and white blazed across the sky in a dazzling phenomenon known as the northern lights or aurora borealis Monday night.

Sky-gazers throughout Fairborn and most of the nation observed the northern lights which normally are seen at high latitudes.

The lights were observed in points as scattered as Boston, New York, Des Moines, Ia., Albuquerque, N.M., Tulsa, Okla., Nashville, Tenn., Seattle, Los Angeles, Chicago and as far south as Vero Beach, Fla.

One person living in the Wright View area called the Daily Herald after noting the red sky to know if Fairborn had a big fire.

The unusually intense display had marked effect on radio transmission and teletype wires. Radio hams in the Minneapolis area reported they were unable to operate during the display.
