Ref query to AMIC re blue-green globular object reported by many over Cleveland, Ohio on night 5 Nov, and press inquiries to your office. Flt vectored over Cleveland to check. No obj in sir. However, scattered clouds and contrails, with searchlights up from Cleveland found. Proved repeatedly that blue or greenish-white beams often will blend with background, and only circular or elliptical reflection of searchlight underneath scattered clouds visible. This gives illusion of solid object moving rapidly in sky.

Report stats movement counter-clockise in circle. This typical of searchlights. Reporting observers cannot be considered very reliable as to est size: basketball size at arms length would make object almost 3 miles in diameter at given altitude.
