3. DATE-TIME GROUP Local _____ GMT 1100Z	4. TYPE OF OBSERVATION <input checked="" type="checkbox"/> Ground-Visual <input type="checkbox"/> Ground-Radar  <input type="checkbox"/> Air-Visual <input type="checkbox"/> Air-Intercept Radar	
5. PHOTOS <input type="checkbox"/> Yes <input type="checkbox"/> No	6. SOURCE Civilian	
7. LENGTH OF OBSERVATION 6 min	8. NUMBER OF OBJECTS 1	9. COURSE S
10. BRIEF SUMMARY OF SIGHTING Yellow toward orange speck. Speck grew larger as they drove toward it leaving a decided yellow tail very straight and bright which dispersed in time like the tail stream of a jet. Obj had an upper part much like the top of a sphere, while the lower part was rather level or flat.		11. COMMENTS Description is typical of any obj that is in the sky during the time of day reported. The flight path and duration is typical of a high altitude jet aircraft. It is the opinion of this analyst that the observers probably saw an a/c and the yellow trail --a contrail with sun reflecting from it.

MEMORANDUM TO SAC

February 4, 1959

FROM SA COHILLAN

RE: FLYING SAUCER SIGHTING  
Information Concerning

Dr. ██████████, ██████████, Ann Arbor, Michigan, Director of the English Language Institute and Professor of English, University of Michigan, Ann Arbor, Michigan, advised the writer this date of the following information:

Dr. ██████████ and his wife while driving west on the Chic Turnpike, near Turnpike Exit # 7, at 6:00 PM on February 2, 1959, observed a so called "Flying Saucer". He described it as a yellow toward orange speck on the west horizon when they initially saw it. He said at that time they were amused in that it looked like what they had heard of "Flying Saucers", and they were only mildly interested in determining what it actually was.

The speck of light grew larger as it approached their location or as they drove toward it. The color was quite distinct but at this point it still gave no distinct shape. It headed due south leaving a decided yellow tail, very straight and bright. This tail, Dr. ██████████ said, might compare with the appearance of the lining of a cloud in the setting sun. On watching it however, he said, he and his wife determined to their satisfaction it was in fact the tail of the thing. It left a straight tail which dispersed in time like tail stream of a jet.

The thing then lost altitude, described a lowering arch which left a long tail, the tail becoming corrugated, as though fading away. It stopped then leaving a tail streak and there developed a decided separation between the speck of thing and the streak or tail. In the general area of the yellow point, Dr. LADO said they then observed the silhouette of a conventional aircraft going in the opposite direction and descending closer to their position than was the thing. He said they saw no contact between the yellow thing and the aircraft.

24-118

He said the "yellow thing" had an upper part much like the top of a sphere, while the lower part was rather level or flat.

Dr. ██████████ stated that he and his wife observed the above circumstances for a full six minutes in a clear sky from about 6:00 to 6:06 PM 2/2/1959. He added that he and his wife had previously scoffed at this sort of thing. He volunteered that both he and his wife are reasonably intelligent persons and are both level headed. He added that both he and his wife are of the conviction they observed a "Flying Saucer".

It is recommended that the above be furnished to the appropriate military agency at Detroit.
