ATIC FORM 329 (REV 26 SEP 52)

AEROSPACE TECHNICAL INTELLIGENCE CENTER
UNITED STATES AIR FORCE
WRIGHT-PATTERSON AIR FORCE BASE
OHIO

REPLY TO
ATTN OF: AFCIN-4E2

SUBJECT: UFO Film (M[REDACTED])

1 JUL 1960

TO: SAFOI-3d (L/Col Tacker)

1. Mr [REDACTED] photographer for [REDACTED] of Champaign, Illinois forwarded a film strip to the U. S. Air Force which showed a UFO on several frames.
2. Mr [REDACTED] was filming a routine silhouette of a statue in the city owned West Side Park in Champaign, Illinois. The filming took place at 2055Z on 7 June 1960.
3. The film was analyzed by ATIC and the following concluded:
 - a. The object on the film is a genuine photographic image.
 - b. The object was a light source of considerable intensity, due to its being entirely visible within eight degrees of the sun.
 - c. The object was traveling at a very high velocity as evidenced by the fact that it moved through the camera's field of view in $1\frac{1}{4}$ seconds.
4. Image motion during exposure precludes any analysis of object configuration; however, its extremely high velocity and brightness indicates that the object was probably a meteor of the "fireball" class.
5. [REDACTED] has not given any publicity to this sighting, but Mr [REDACTED] did request notification of the result of the Air Force analysis.
6. Mr [REDACTED] home and business addresses are as follows:

Home [REDACTED] [REDACTED] [REDACTED], Illinois	Business [REDACTED] [REDACTED] [REDACTED], Illinois
---	---
7. The film strip is being retained at ATIC as a part of the case file for this sighting, and will not be returned unless Mr [REDACTED] makes this specific request.

Ltr AFCIN-4E2, 14 June 1960, Request for Photoanalysis

1st Ind (AFCIN-4D4a)

27 June 1960

TO: AFCIN-4E2 (Col R. R. Shoop)

1. The attached film has been analyzed and the following conclusions reached:

a. If the data accompanying the photography is true and correct, some very intense light source moved through the camera's field of view in $1\frac{1}{4}$ seconds. The intensity of the light source is indicated by the fact that it is entirely visible when within eight degrees of the sun.

b. The information given regarding camera tilt is verified by the sun angle at the stated time of photography.

c. Image motion during exposure precludes any analysis of object configuration.

d. The photography and exposure data give no clue as to size, speed or distance of the object, however, the camera data indicates that if the object was moving in a horizontal plane its velocity was approximately one mile per hour for every foot of altitude above the camera station, ie, 500mph if at 500 ft. altitude, 1000mph at 1000 ft. altitude, etc.

e. If the photography is faked, it was probably accomplished by a double exposure in which a light source was moved across the camera's field of view at a uniform velocity.

8 July 1960

Dear Mr. [REDACTED]

This is to acknowledge your recent submission of a film strip to the Air Force which evidently showed a UFO on several frames. The filming took place on 7 June 1960 at Champaign, Illinois.

The object on the film is a genuine photographic image. It had a light source of considerable intensity, due to its being entirely visible within eight degrees of the sun. The high velocity of the object is evidenced by the fact that it moved through the camera's field of view in $1\frac{1}{4}$ seconds. Image motion precludes any analysis of object configuration. However, the high velocity and brightness indicates that the object was probably a meteor of the "fireball" class.

With your permission, the Air Force would like to retain the film strip in this case for the official file. If this is not possible please let me know and I will return the film to you immediately.

Thank you very much for your interest in this matter.

Sincerely,

LAWRENCE J. TACKER
Lt. Colonel, USAF
Public Information Division
