

MILITARY RADAR

PROJECT 10073 RECORD CARD

1. DATE 29 Sep 60		2. LOCATION Guam		12. CONCLUSIONS ☐ Was Balloon ☐ Probably Balloon ☐ Possibly Balloon	
3. DATE-TIME GROUP Local _____ GMT 29/1235Z		4. TYPE OF OBSERVATION ☒ Ground-Visual Binoculars ☐ Air-Visual ☒ Ground-Radar <i>VISUAL</i> ☐ Air-Intercept Radar		☒ Was Aircraft ☐ Probably Aircraft ☐ Possibly Aircraft	
5. PHOTOS ☐ Yes ☒ No		6. SOURCE Military		☐ Was Astronomical ☐ Probably Astronomical ☐ Possibly Astronomical	
7. LENGTH OF OBSERVATION few sec		8. NUMBER OF OBJECTS one	9. COURSE SW-NW	☒ Other <i>Anom Prop.</i> ☐ Insufficient Data for Evaluation ☐ Unknown	
10. BRIEF SUMMARY OF SIGHTING Target picked up on radar at 20 miles, tracked to within 2 miles of NAS on collision course. Estimated speed 2880 knots. Visual observation of pale blue light (with binoculars) contact lost when observer turned away for a second.			11. COMMENTS Anomalous propagation frequently causes false targets on radar scopes traveling at apparently fantastic speeds, and it appears that this might well be the answer here. <i>VISUAL CONTACT BELIEVED TO BE APC.</i>

Memo, AFCIN-4E2x, 11 Oct 60, Request for Analysis

1st Ind (AFCIN-4E1a/Mr. Bryant/jc/74201)

14 Nov 60

TO: AFCIN-4E2X

1. The facts as presented in this report are insufficient to support a firm analysis. The fact that the "target" moved from a range of 20 miles to a range of 2 miles at a speed of 2880 knots indicates that the target was observed for about 1/3 minute. This is a rather short time to observe the target on radar and correlate a visual observation.

2. The speed of the target, the fact that no plane was known to be in the area, lack of aural observation, and the fact that the target was not observed on an outward course all tend to mitigate against an aircraft target. On the other hand, anomalous propagation frequently causes false targets on radar scopes traveling at apparently fantastic speeds, and it appears that this might well be the answer here.

REPLY TO
ATTN OF: AFCIN-4E2x

SUBJECT: Request for Analysis

11 October 1960

TO: AFCIN-4E1

Request radar analysis of attached unidentified flying object sighting be accomplished and results forwarded to AFCIN-4E2x with as little delay as possible.
