7. LENGTH OF OBSERVATION 4 min 35 sec		8. NUMBER OF OBJECTS One		9. COURSE ---	
10. BRIEF SUMMARY OF SIGHTING Star shaped object approx size of Polaris and white in color observed within a degree or two of the star Polaris. Estimated altitude at 60-80 miles. From this position object disappeared over the horizon into the twilight zone just as the sun was appearing on the horizon. Object flew in a steady straight course slightly converging with the a/c course of 090 degrees true.				11. COMMENTS Object was apparently moving in the same direction as the aircraft of the witness. Duration of the sighting would be too short for an object within the Earth's atmosphere. Object appears to be Satellite, however a check with Space Track indicated that the object was NOT ECHO I. Only copilot observed the object, and the pilot did not confirm the sighting. Object was probably a satellite, however in view of lack of confirming data case is listed as insufficient data.
