## two sightings

5 " SEP 1961.

# Madletown, Ohio

Dear Mr. [REDACTED]

Your letter reporting the sighting of a UFO has been forwarded to the Foreign Technology Division. It does not contain sufficient information for a valid conclusion; therefore, request you complete the attached form and return it in the attached self-addressed envelope as soon as possible.

**Sincerely**

*President*  
**EDWARD H. WARD**  
*Colonel, USAF*  
*Deputy for Science*  
*and Components*

M [REDACTED] O  
August 22, 1961

Office of Public Information  
Wright - Patterson Air Force Base  
Dayton, Ohio

Gentlemen:

During the past two weeks I have been visually observing an object in orbit around the earth. I first saw it at 00:30 hours on August 6, 1961. Since that time I have seen it some ten times. I have been able to determine that it takes about twenty-four hours for it to orbit. It travels about fifteen degrees per. hour. I see it every clear night. It always comes up about fifteen degrees east of magnetic north and moves toward the southeast. I followed its course Wed. night August 16, for three and one half hours and checked its traveled distance at fifty two and one half degrees. This further proves its time to orbit as twenty four hours.

I do not remember hearing of a satellite being put in orbit that would take this long to orbit. Also if it takes twenty four hours to orbit and is traveling close to eighteen thousand miles per. hour, to stay in orbit, it would be some sixty five thousand miles above the earth. If it is at this altitude, it must be something very large, because it appears about as bright as a second magnitude star.

I wonder if you have any information as to what it is. If so I hope you will let me know.

Yours Truly  
[REDACTED]

## U.S. AIR FORCE TECHNICAL INFORMATION SHEET

This questionnaire has been prepared so that you can give the U.S. Air Force as much information as possible concerning the unidentified aerial phenomenon that you have observed. Please try to answer as many questions as you possibly can. The information that you give will be used for research purposes, and will be regarded as confidential material. Your name will not be used in connection with any statements, conclusions, or publications without your permission. We request this personal information so that, if it is deemed necessary, we may contact you for further details.

1. When did you see the object?

6 Day      8 Month      1961 Year

2. Time of day: 12 Hour      30 Minutes

(Circle One): A.M. or P.M.

3. Time Zone:

(Circle One):  
 a. Eastern  
 b. Central  
 c. Mountain  
 d. Pacific  
 e. Other

(Circle One):  
 a. Daylight Saving  
 b. Standard

4. Where were you when you saw the object?

Nearest Postal Address

Middletown

City or Town

Ohio

State or Country

Additional remarks: \_\_\_\_\_

5. How long was object in sight?

1 Hours      Minutes      Seconds

5.1 How was time in sight determined?

a. Certain  
 b. Fairly certain

c. Not very sure  
 d. Just a guess

6. What was the condition of the sky?

DAY

a. Bright  
 b. Cloudy

NIGHT

a. Bright  
 b. Cloudy

7. IF you saw the object during DAYLIGHT, where was the SUN located as you looked at the object?

(Circle One):  
 a. In front of you  
 b. In back of you  
 c. To your right

d. To your left  
 e. Overhead  
 f. Don't remember

8. IF you saw the object at NIGHT, what did you notice concerning the STARS and MOON?

8.1 STARS (Circle One):

- a. None
- b. A few
- c. Many**
- d. Don't remember

8.2 MOON (Circle One):

- a. Bright moonlight
- b. Dull moonlight**
- c. No moonlight — pitch dark
- d. Don't remember

9. The object appeared:

(Circle One):

- a. As a light**
- b. Shiny
- c. Dark
- d. Don't remember

10. If it appeared as a light, was it brighter than the brightest stars?

*No, about the brightness of a 3rd magnitude star.*

11. Did the object:

(Circle One for each question)

- a. Appear to stand still at any time?
- b. Suddenly speed up and rush away at any time?
- c. Break up into parts or explode?
- d. Give off smoke?
- e. Change brightness?
- f. Change shape?
- g. Flash or flicker?
- h. Disappear and reappear?

Yes	<input checked="" type="radio"/>	No	Don't Know
Yes	<input checked="" type="radio"/>	No	Don't Know
Yes	<input checked="" type="radio"/>	No	Don't Know
Yes	<input checked="" type="radio"/>	No	Don't Know
<input checked="" type="radio"/>	No	No	Don't Know
Yes	<input checked="" type="radio"/>	No	Don't Know
<input checked="" type="radio"/>	No	No	Don't Know
Yes	<input checked="" type="radio"/>	No	Don't Know

12. Did the object move behind something at any time, particularly a cloud?

(Circle One):

Yes

Don't Know.

IF you answered YES, then tell what

it moved behind: \_\_\_\_\_

13. Did the object move in front of something at any time, particularly a cloud?

(Circle One):

Yes

Don't Know.

IF you answered YES, then tell what

in front of: \_\_\_\_\_

14. Did the object appear: (Circle One):

**a. Solid**

b. Transparent

c. Vapor

d. Don't Know

15. Did you observe the object through any of the following?

- a. Eyeglasses
- b. Sun glasses
- c. Windshield
- d. Window glass

Yes

Yes

Yes

Yes

e. Binoculars

f. Telescope

g. Theodolite

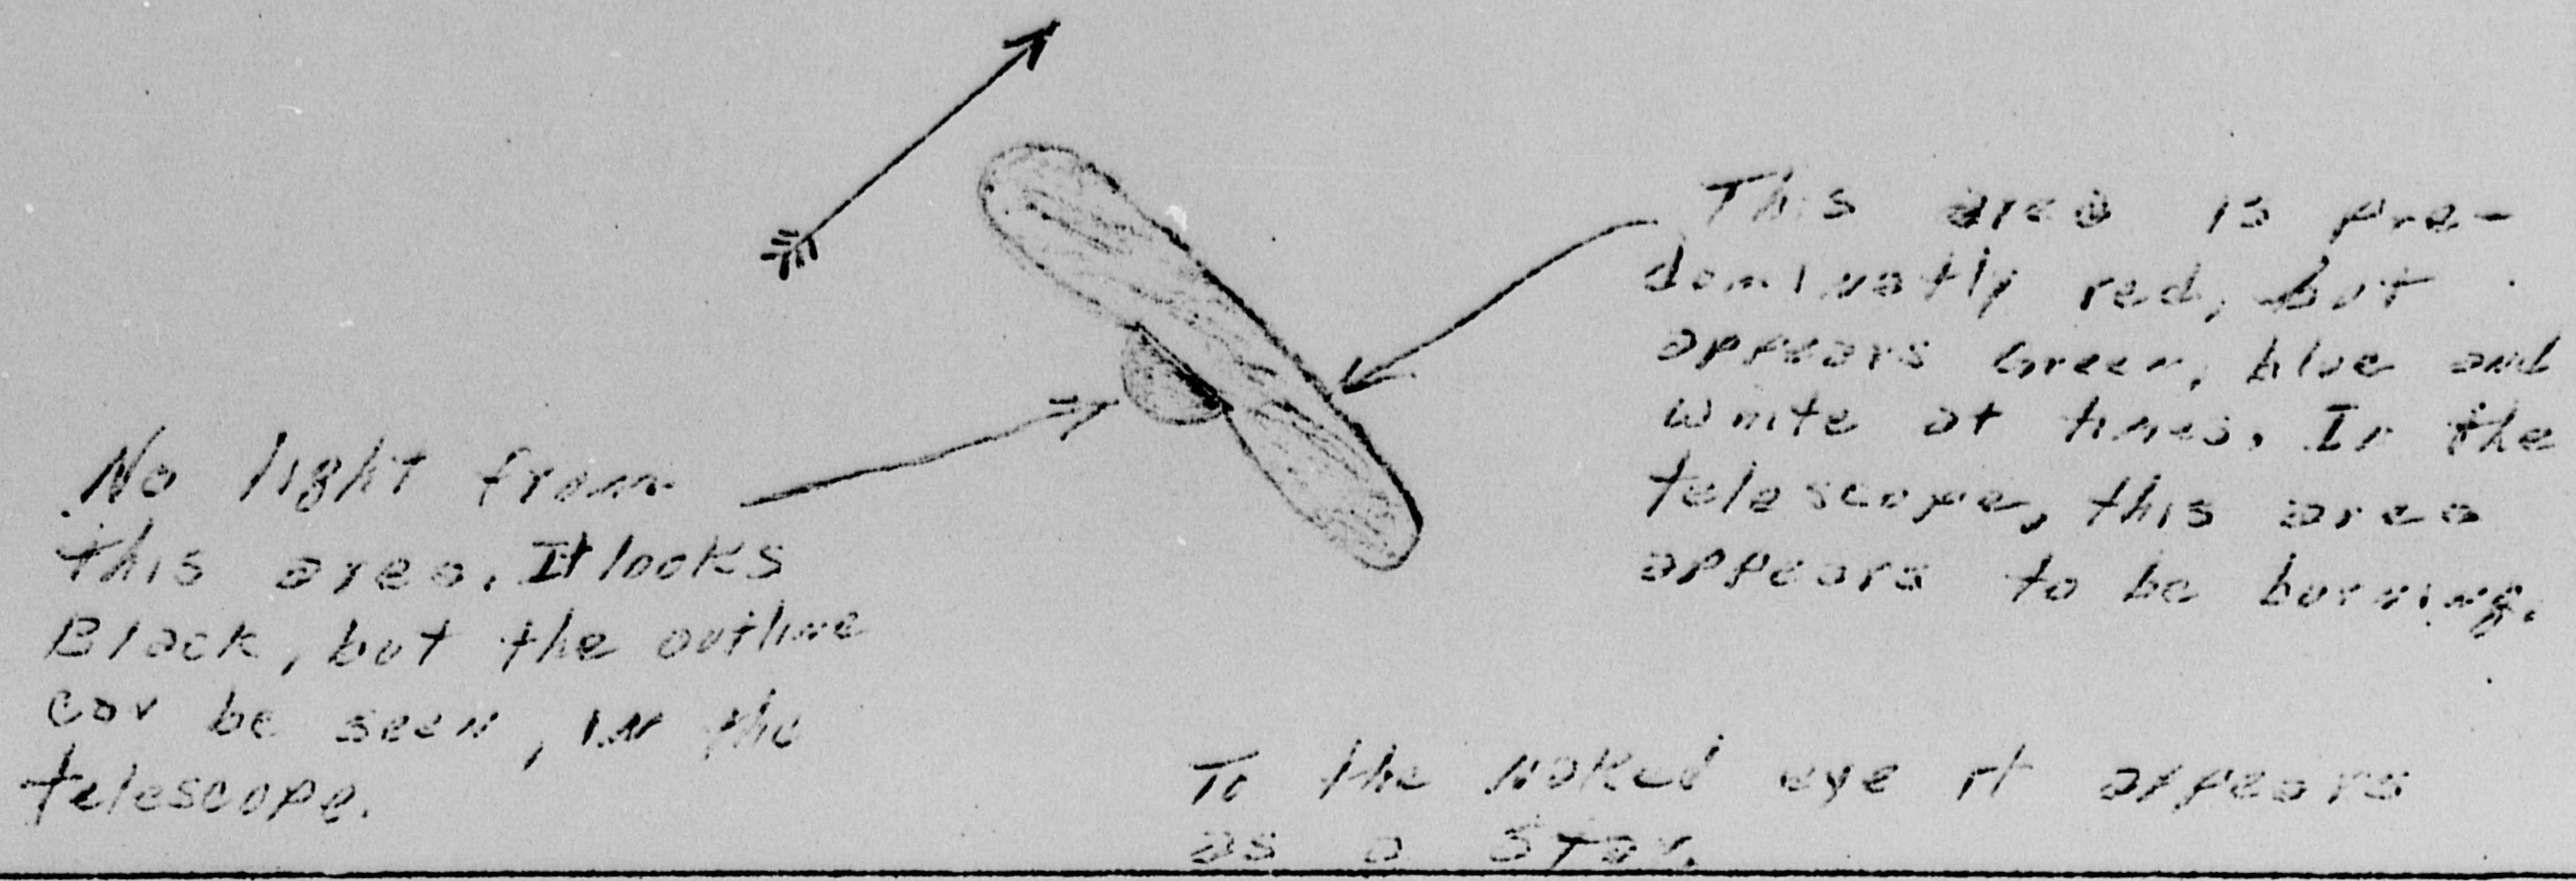

h. Other \_\_\_\_\_

16. Tell in a few words the following things about the object.

a. Sound None

b. Color Red with flashes of white, Green and Blue

17. Draw a picture that will show the shape of the object or objects. Label and include in your sketch any details of the object that you saw such as wings, protrusions, etc., and especially exhaust trails or vapor trails. Place an arrow beside the drawing to show the direction the object was moving.

18. The edges of the object were:

(Circle One): a. Fuzzy or blurred

b. Like a bright star naked eye

c. Sharply outlined) in telescope

d. Don't remember

e. Other \_\_\_\_\_

19. IF there was MORE THAN ONE object, then how many were there?

Draw a picture of how they were arranged, and put an arrow to show the direction that they were traveling.

20. Draw a picture that will show the motion that the object or objects made. Place an "A" at the beginning of the path, a "B" at the end of the path, and show any changes in direction during the course.

21. How large did the object appear to you as compared to an object with which you are familiar?

About twice the size of the Planet Jupiter-viewed w/ a telescope.

22. We wish to know the angular size. Hold a match stick at arm's length in line with a known object and note how much of the object is covered by the head of the match. If you had performed this experiment at the time of the sighting, how much of the object would have been covered by the match head?

All of it, sighting with one eye.

23. Did the object disappear while you were watching it? If so, how? No

24. In order that you can give as clear a picture as possible of what you saw, describe in your own words a common object or objects which, when placed up in the sky, would give the same appearance as the object which you saw.

A large balloon, with one side burning and flame shooting out from center line of balloon, to four times the diameter of the balloon.

25. Where were you located when you saw the object? (Circle One):

- a. Inside a building
- b. In a car
- c. **Outdoors**
- d. In an airplane (type)
- e. At sea
- f. Other \_\_\_\_\_

26. Were you (Circle One)

- a. In the business section of a city?
- b. In the residential section of a city?
- c. In open countryside?
- d. Near an airfield?
- e. Flying over a city?
- f. Flying over open country?
- g. Other \_\_\_\_\_

27. What were you doing at the time you saw the object, and how did you happen to notice it?

I was looking for the Wilson Comet

28. IF you were MOVING IN AN AUTOMOBILE or other vehicle at the time, then complete the following questions:

28.1 What direction were you moving? (Circle One)

a. North	c. East	e. South	g. West
b. Northeast	d. Southeast	f. Southwest	h. Northwest

28.2 How fast were you moving? \_\_\_\_\_ miles per hour.

28.3 Did you stop at any time while you were looking at the object?

(Circle One) Yes No

29. What direction were you looking when you first saw the object? (Circle One)

a. North	c. East	e. South	g. West
b. Northeast	d. Southeast	f. Southwest	h. Northwest
			i. Overhead

30. What direction were you looking when you last saw the object? (Circle One)

a. North	c. East	e. South	g. West
b. Northeast	d. Southeast	f. Southwest	h. Northwest
			i. Overhead

31. If you are familiar with bearing terms (angular direction), try to estimate the number of degrees the object was from true North (thru east) and also the number of degrees it was upward from the horizon (elevation).

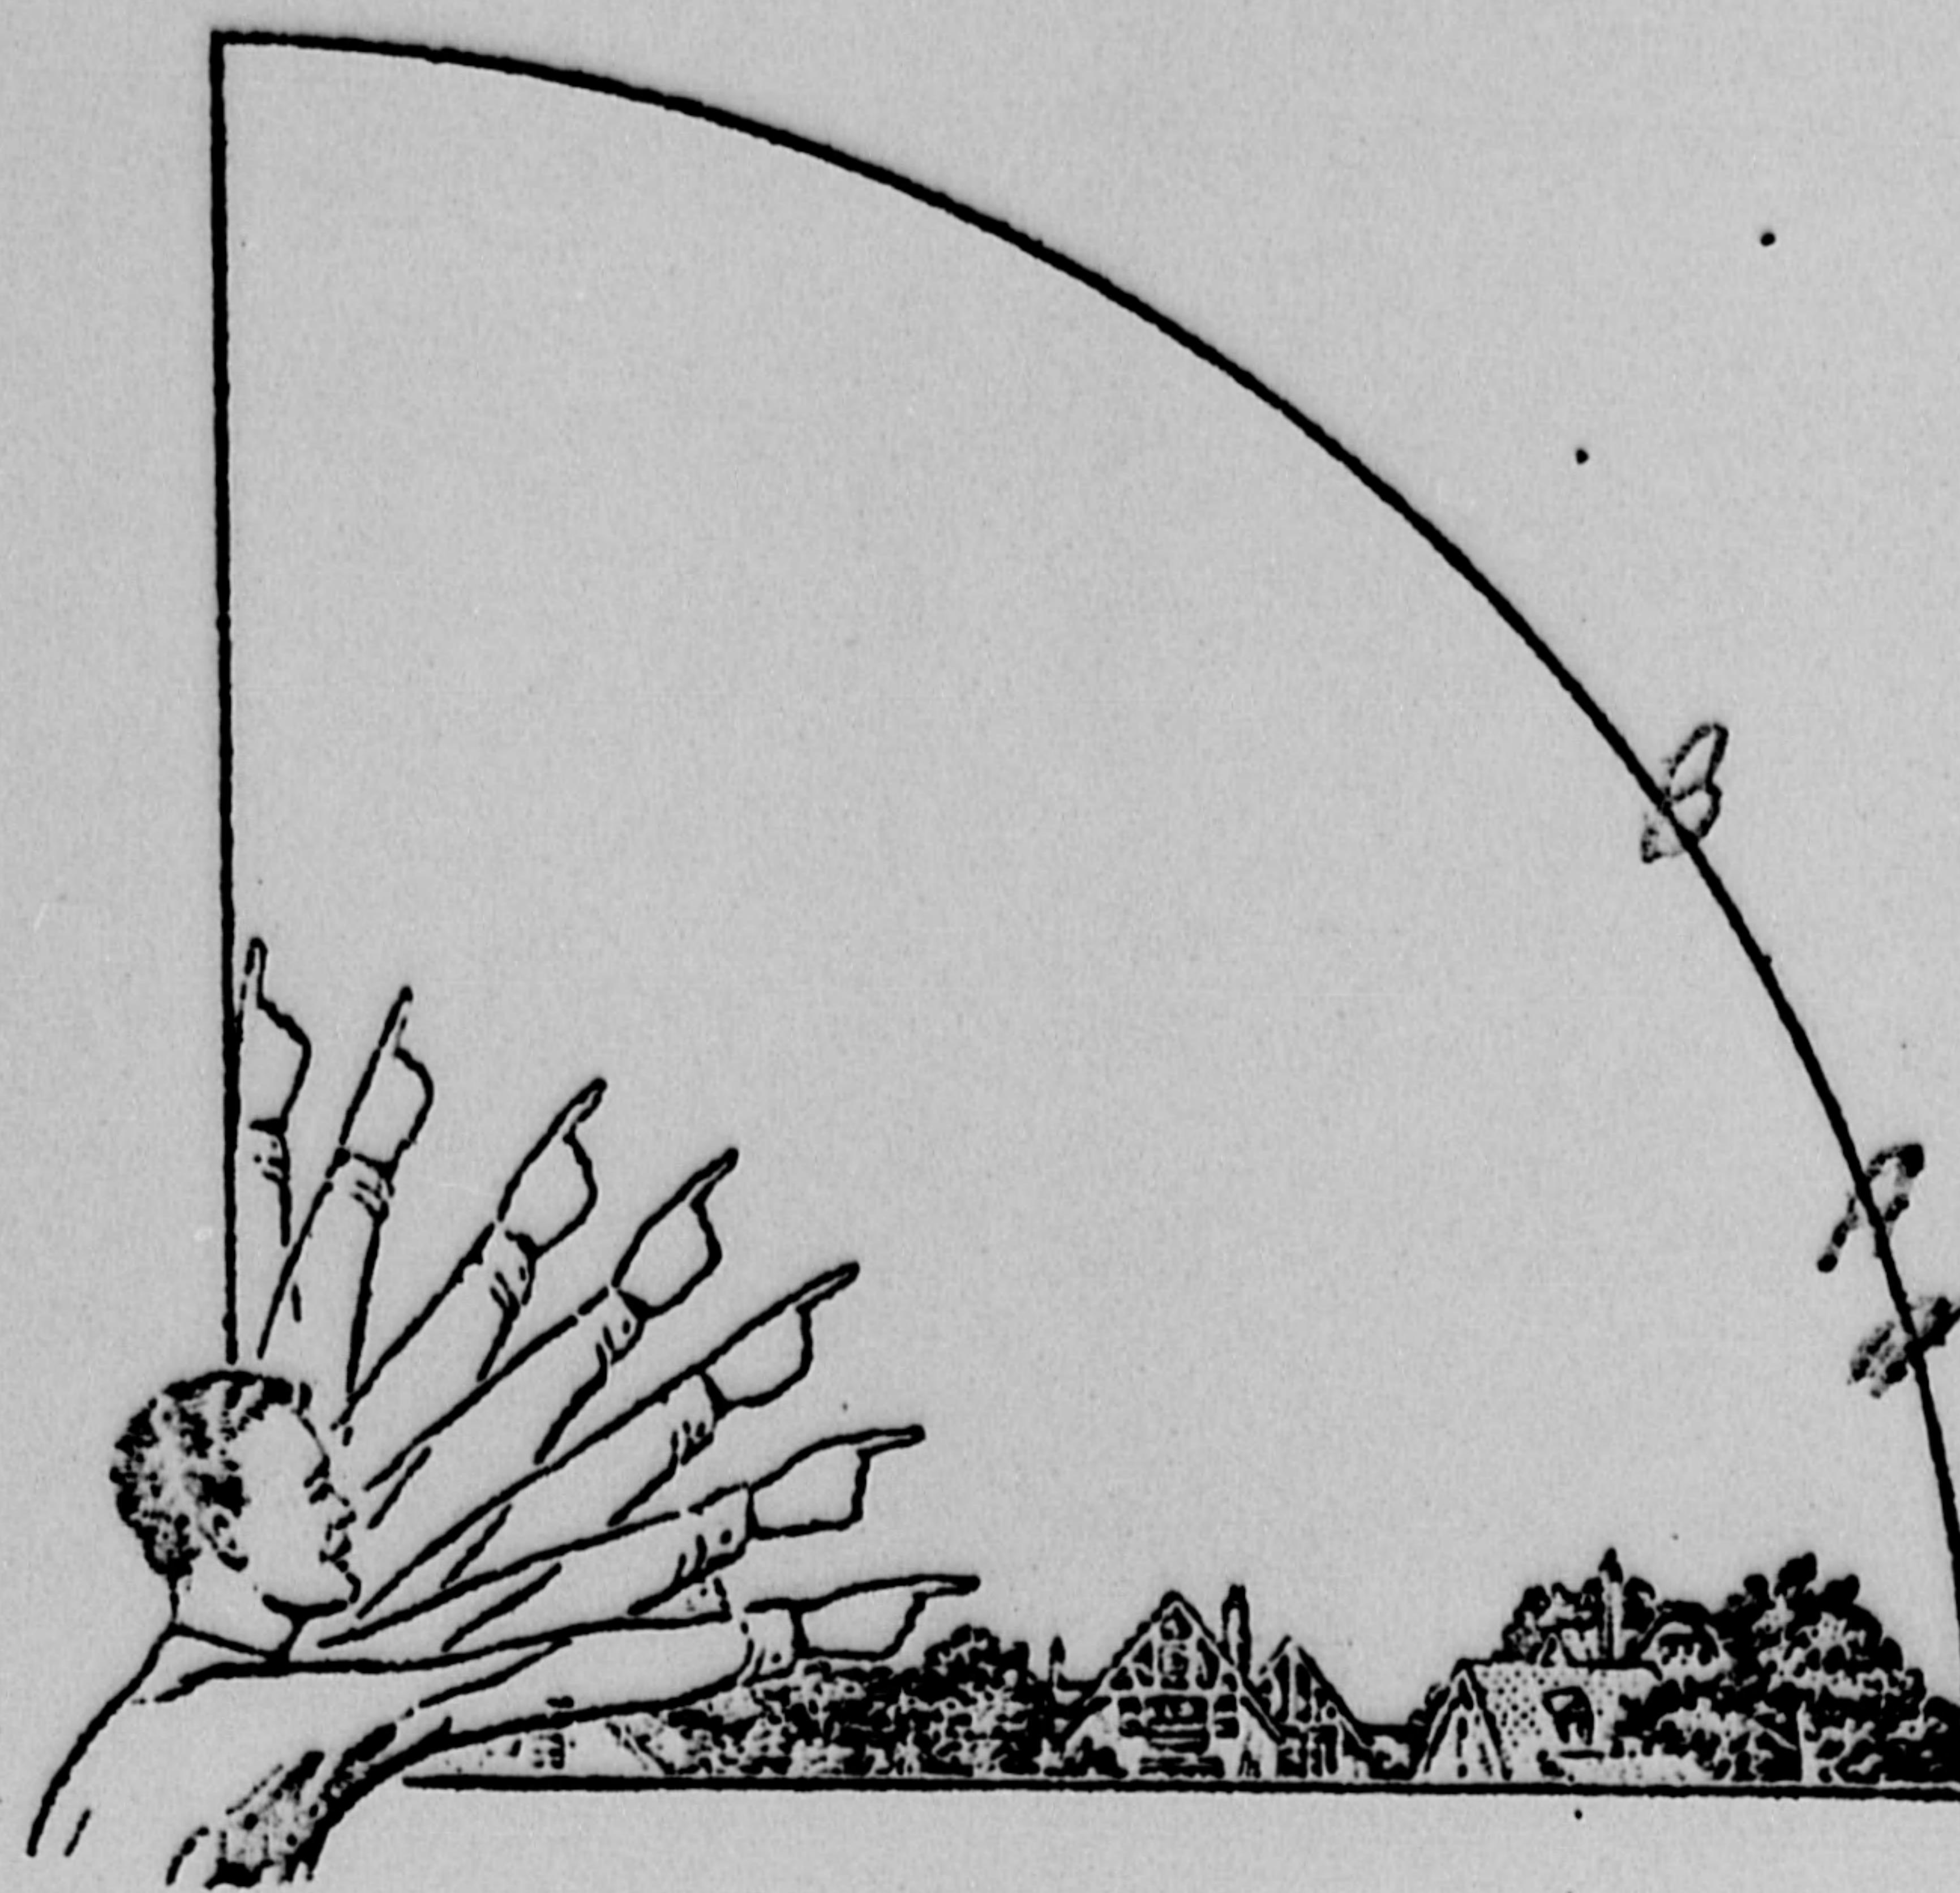

31.1 When it first appeared:

- a. From true North 30 degrees.
- b. From horizon 15 degrees.

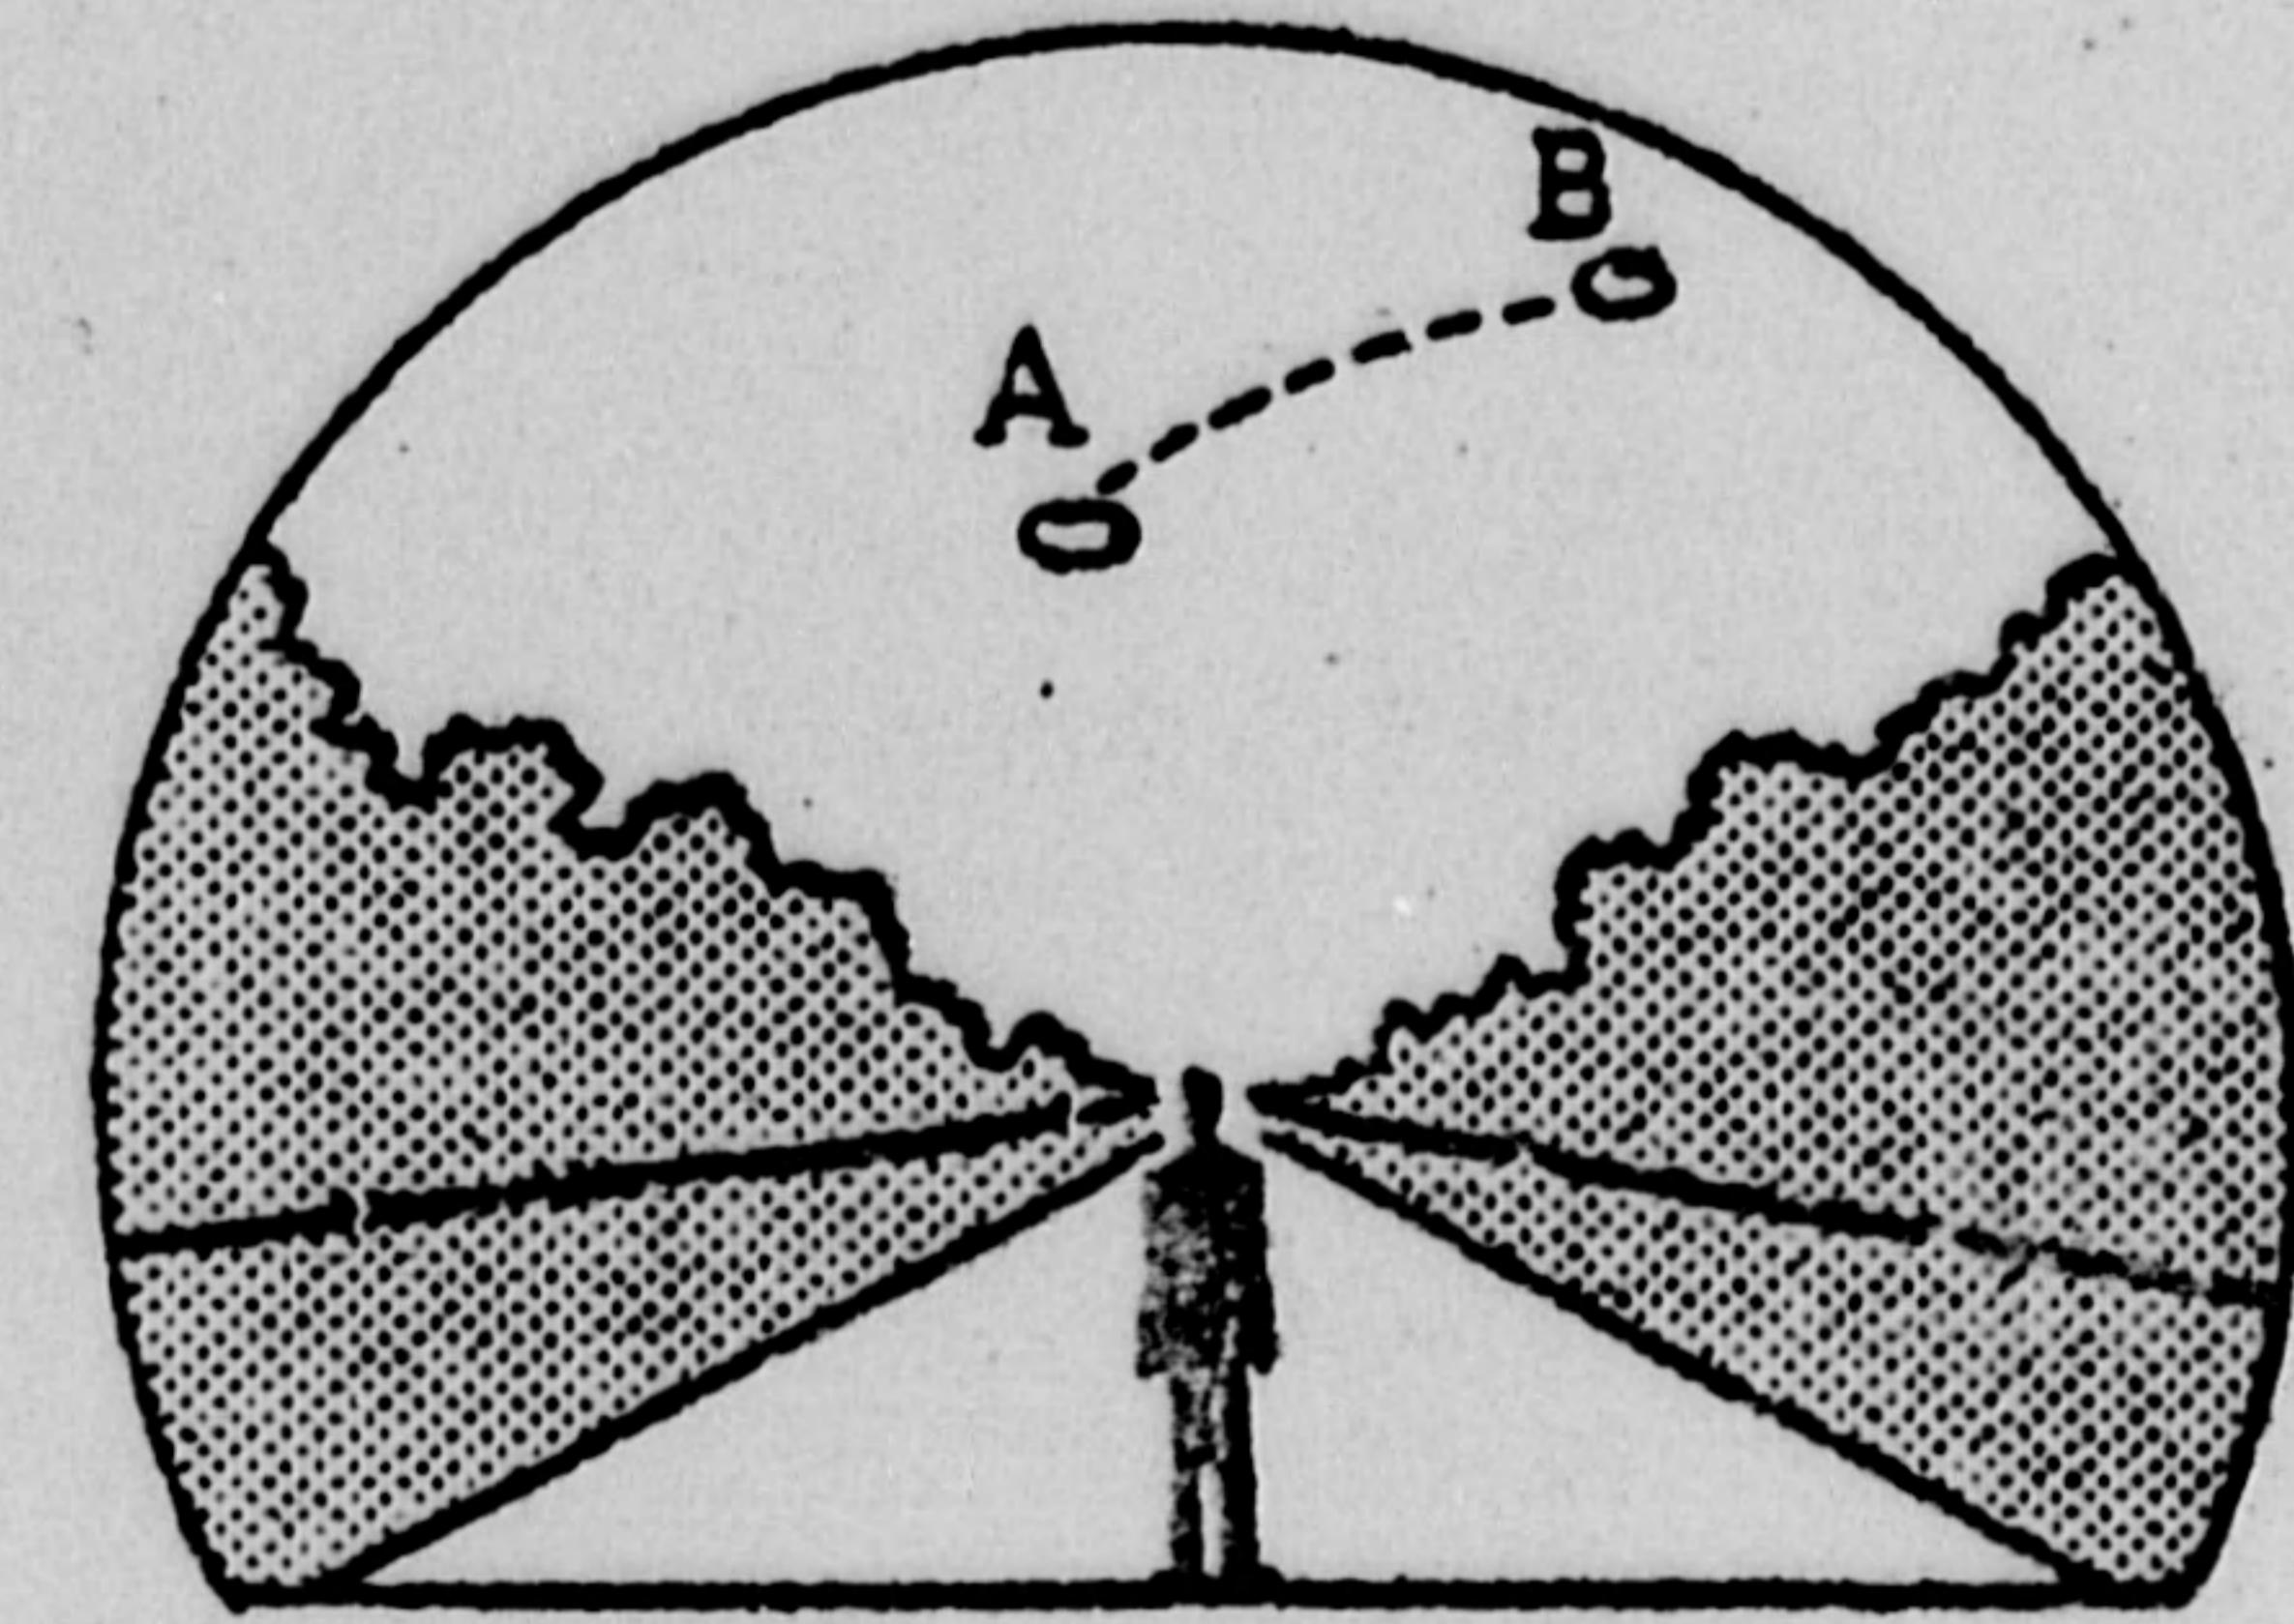

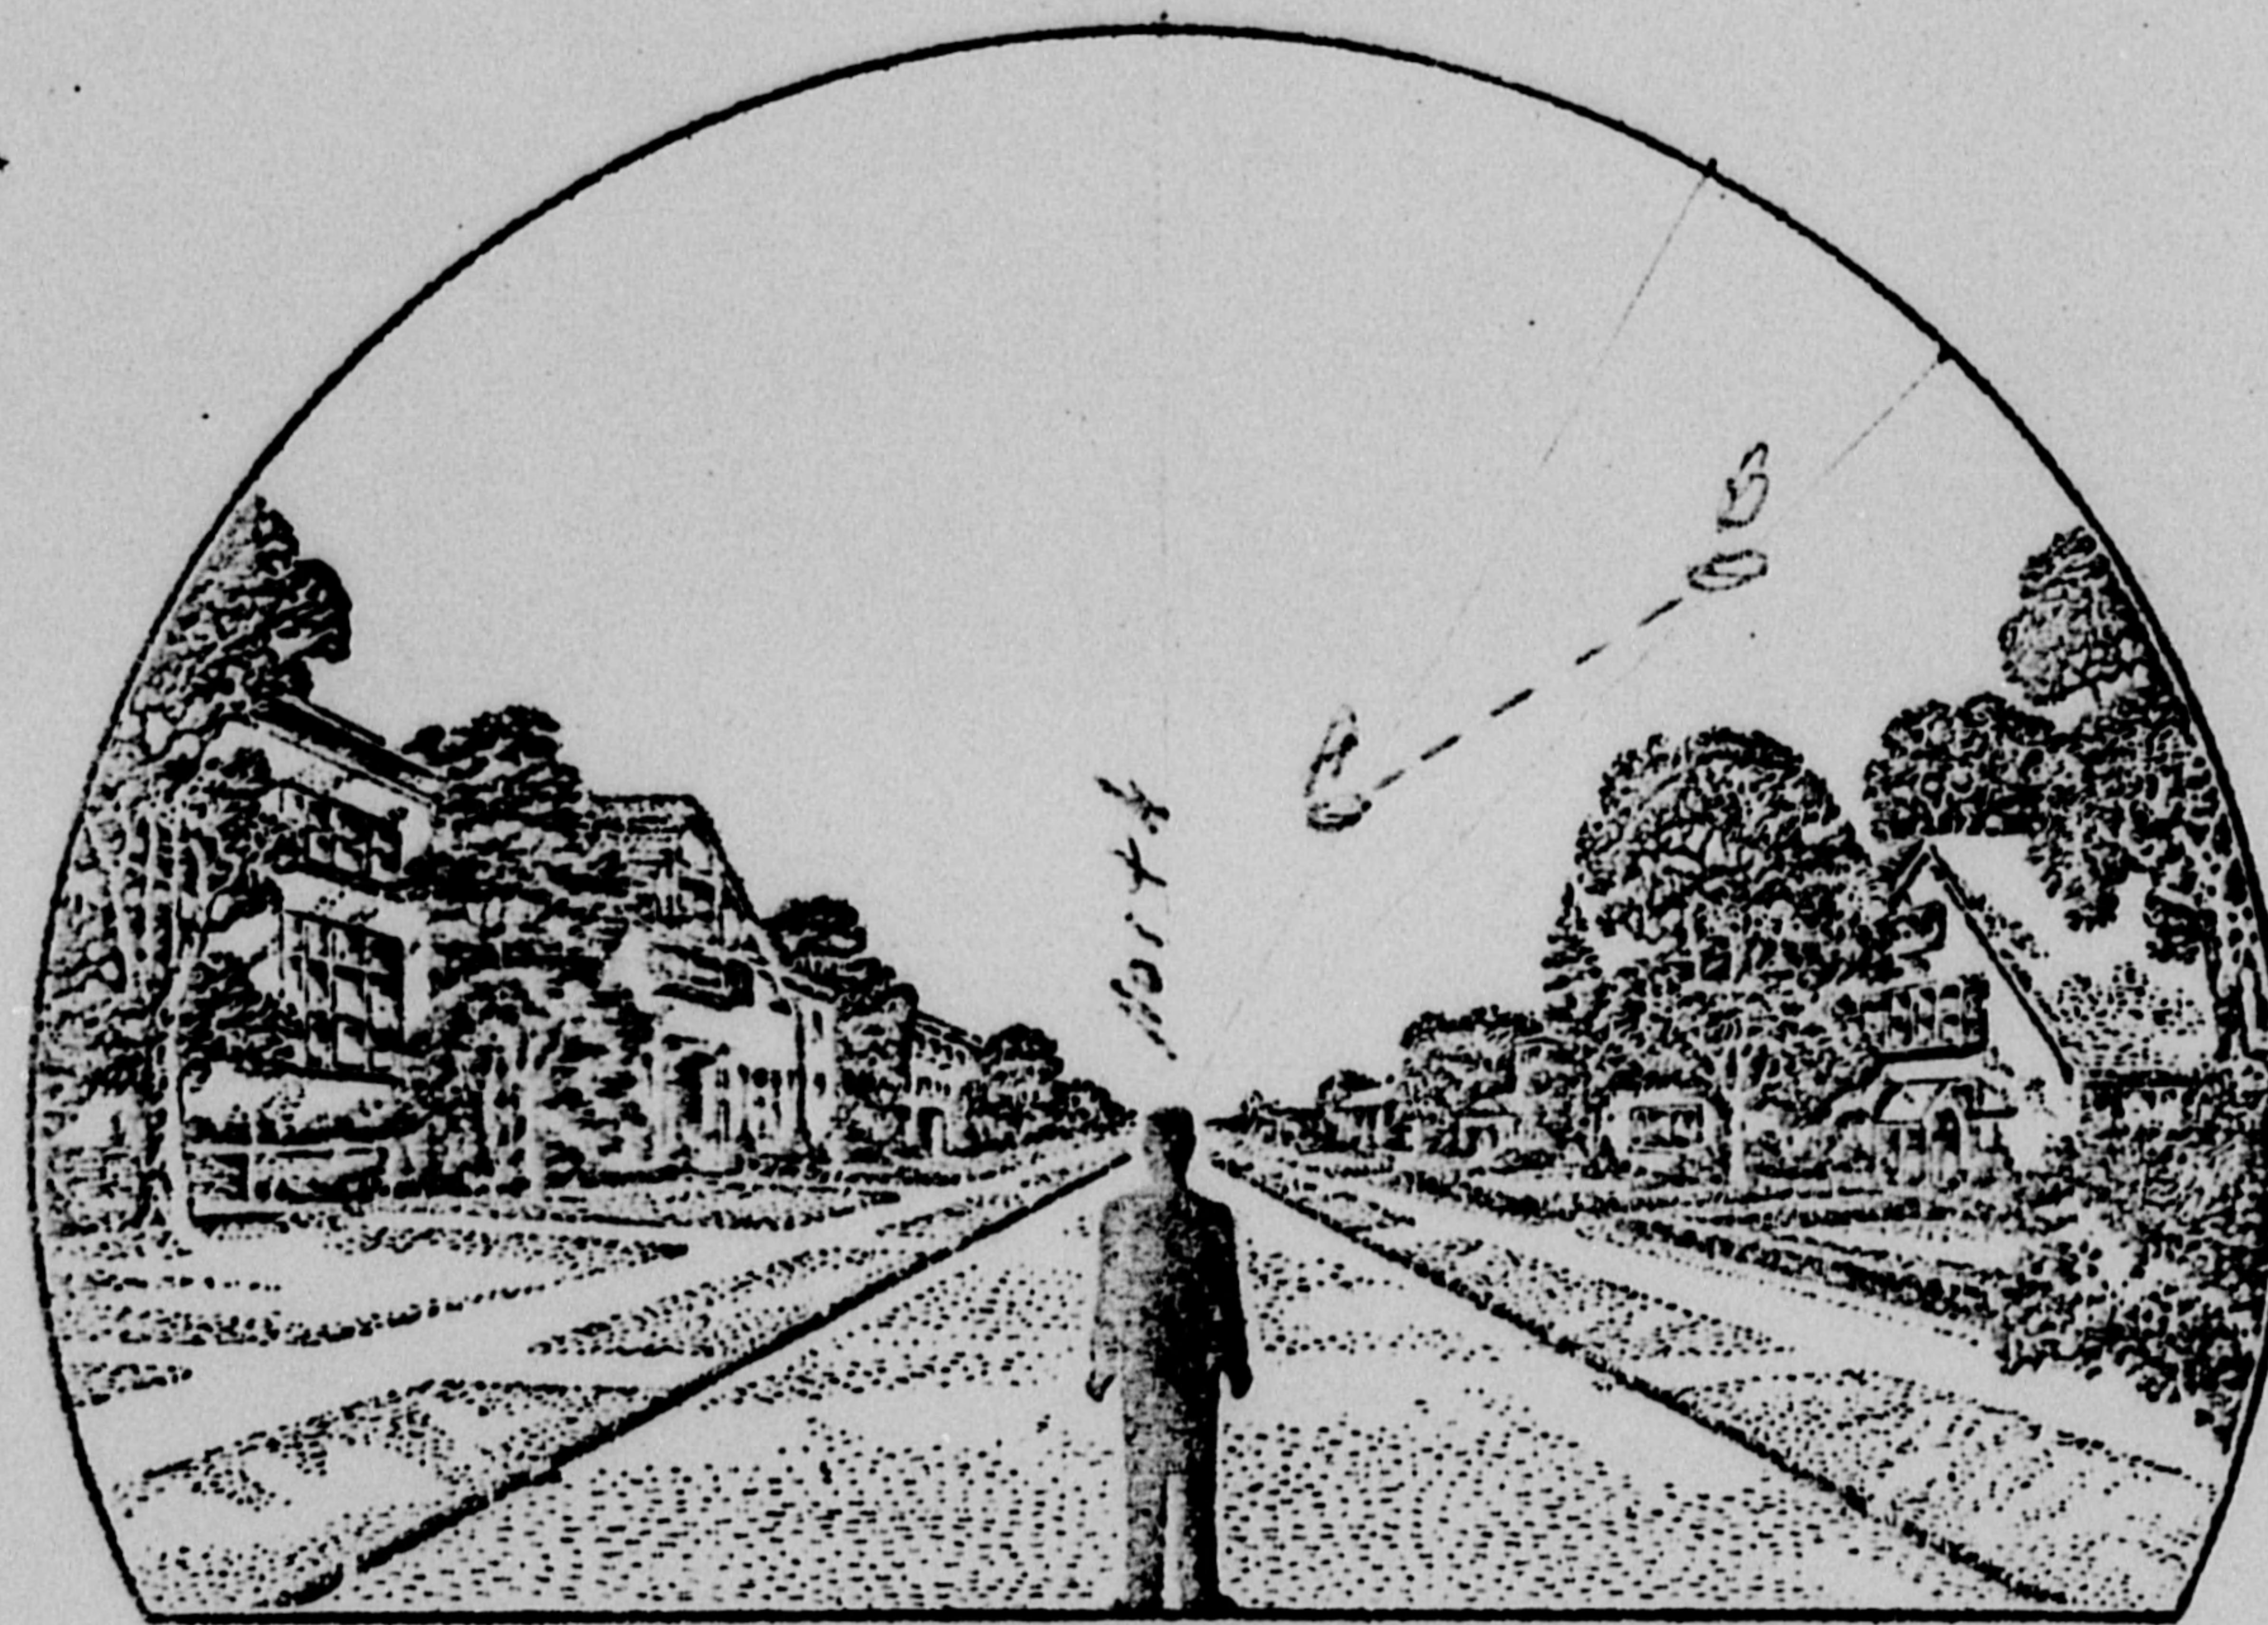

31.2 When it disappeared:

- a. From true North 45 degrees. When I stopped observing.
- b. From horizon 30 degrees. It was still visible.

32. In the following sketch, imagine that you are at the point shown. Place an "A" on the curved line to show how high the object was above the horizon (skyline) when you first saw it. Place a "B" on the same curved line to show how high the object was above the horizon (skyline) when you last saw it.

33. In the following larger sketch place an "A" at the position the object was when you first saw it, and a "B" at its position when you last saw it. Refer to smaller sketch as an example of how to complete the larger sketch.

34. What were the weather conditions at the time you saw the object?

CLOUDS (Circle One)

- a. Clear sky
- b. Hazy
- c. Scattered clouds
- d. Thick or heavy clouds

WEATHER (Circle One)

- a. Dry
- b. Fog, mist, or light rain
- c. Moderate or heavy rain
- d. Snow
- e. Don't remember

35. When and to whom did you report that you had seen the object?

15                    3                    61  
Day                  Month                  Year

Middletown Journal

24

8

1961

Information Officer M.P.B.F.P.

36. Was anyone else with you at the time you saw the object?

(Circle One)  Yes      No

36.1 IF you answered YES, did they see the object too?

(Circle One)  Yes      No

36.2 Please list their names

Mrs. S.

3

Middletown, Ohio

37. Was this the first time that you had seen an object or objects like this?

(Circle One)  Yes      No

37.1 IF you answered NO, then when, where, and under what circumstances did you see other ones?

---

---

---

---

38. In your opinion what do you think the object was and what might have caused it?

The object is a satellite, in orbit around the earth, as I stated in my letter. I believe it is too large to be put in orbit by either the U.S.A. or Russia. I believe it is an asteroid that has approached the earth at correct speed and angle to be pulled into orbit.

39. Do you think you can estimate the speed of the object?

(Circle One)  Yes  No

IF you answered YES, then what speed would you estimate? 15,000 - 18,000 M.P.H.

40. Do you think you can estimate how far away from you the object was?

(Circle One)  Yes  No

IF you answered YES, then how far away would you say it was? 52,000 - 65,000 miles

41. Please give the following information about yourself:

NAME \_\_\_\_\_  
Last Name \_\_\_\_\_ First Name \_\_\_\_\_ Middle Name \_\_\_\_\_

ADDRESS \_\_\_\_\_  
Street \_\_\_\_\_ City \_\_\_\_\_ Zone \_\_\_\_\_ State \_\_\_\_\_

At 0:30 hours August 6, 1961 while searching for the Wilson Comet that had been visible in the North east, I saw an object that appeared to be something other than a star. I got it in my telescope and it would not stay. I checked it up three or four more times and the same thing happened. I knew then it was moving. I checked the position I first saw it, by compass and protractor and watched it for an hour. Again I checked its position and determined that it had moved approx. 15° since it moved toward the Southeast I knew it was not a star.

Since the first observation I have continued to view the object every other night. I have sighted it perhaps as many

as twenty five times in the past thirty-two days.

As I stated in my letter to the Public Information Office at A.P.A.F.B., it can be observed any clear night. At first it appeared at 12:30 P.M. after four weeks it has changed so as to appear at 10:30 P.M. From this I conclude that it takes 23 hrs. 55 min. and 42 sec. to orbit. I can not remember hearing of a satellite being put in orbit that required this much time to orbit and be visible to the naked eye. Therefore I am trying to determine what it is.

September 9, 1961 I observed the object with a lens on the scope on which I had mounted cross hairs. I observed the planet Jupiter with the same lens and found that Jupiter covered only half as much area. From this I figure the object in orbit must be about 28 miles long. To arrive at this I figured an 18,000 m.p.h. speed to orbit, which would place it at an altitude of approx. 65,000 miles.

Have some of your staff look for it between 10:30 and 10:45 P.M. the first clear night. It always appears 30° east of magnetic north. With a 100 power or better telescope they can observe what I sketched on Page 3 of this document.

at 0:30 hours August 6, 1961 while searching for Wilsons Comet, that had been visible in the Northeast, I saw an object that appeared to be something other than a star. I got it in my telescope and it moved out of view. I picked it up three or four more times and the same thing happened. Then I knew it was moving. I checked the position & first saw it, with a compass and protractor and watched it for an hour. Again I checked its position and found it had moved approx. 15°. Since it moved toward the southeast I knew it was not a star.

Since the first sighting, I have continued to view the object, every clear night. I have sighted it perhaps as many as twenty-five times in the past thirty-two days.

as I stated in my letter to the Public Information Officer at W.P.A.F.B. it can be seen any clear night. At first it appeared at 12:30 P.M. After four weeks it has changed so as to appear at 10:30 P.M. From this I conclude that it takes 23 hrs. 55 min. ad 42 sec. to orbit. I can not remember hearing of a satellite being put in orbit that required this much time to orbit ad be visible to the naked eye. Therefore, I am trying to determine what it is.

September 6, 1961 I observed the object with a lens on the telescope, on which I had mounted cross hairs. I observed the planet Jupiter with the same lens and found that Jupiter covered only half as much lens area. From this, I figure the object in orbit must be about 28 mile long. To P.P.H. to orbit which would place it at an altitude of approx. 65,000 miles.

Have some of your staff watch for it between 10:00 ad 10:30 P.M. the first clear night and they also will see it. It always appears  $30^{\circ}$  east of magnetic north and moves toward the south east. With a 100 power or better telescope they can observe what I sketched on page 3 of this form.
