1. DATE 17 November 1962	2. LOCATION Tampa, Florida		12. CONCLUSIONS ☐ Was Balloon ☐ Probably Balloon ☐ Possibly Balloon ☐ Was Aircraft ☐ Probably Aircraft ☐ Possibly Aircraft ☐ Was Astronomical ☐ Probably Astronomical ☐ Possibly Astronomical ☒ Other <u>UNIDENTIFIED</u> ☐ Insufficient Data for Evaluation ☐ Unknown
3. DATE-TIME GROUP Local _____ GMT <u>18/0200Z</u>	4. TYPE OF OBSERVATION ☒ Ground-Visual ☐ Ground-Radar ☐ Air-Visual ☐ Air-Intercept Radar		
5. PHOTOS ☐ Yes ☒ No	6. SOURCE Civilian		
7. LENGTH OF OBSERVATION 11-15 mins	8. NUMBER OF OBJECTS three	9. COURSE varied	
10. BRIEF SUMMARY OF SIGHTING Cluster of 3 second mag star-like objs in horizontal flight. Approached & hovered. Disappeared by fading into star background. No shape. Approached fm 20 dgr elev to 45 dgr elev where objs hovered 3-5 mins. Approach consumed 3-4 mins, while departure lasted for an additional 3-4 mins. Depart to S _e . Impression that objs were under intelli- gent control at all times. Approach fm NE. After hover made 90 dgr turn.		11. COMMENTS UNIDENTIFIED at this time. No indication that the objs pre- sented a threat to the security of the U.S.

Captain Raymond Henry
Base Information Officer
MacDill Air Force Base
Tampa, Florida

Dear Captain Henry:

This will confirm my telephone conversation with you a few moments ago with relation to the unusual sight that my wife and I witnessed this past Saturday evening at approximately 9:00 P. M.

This sight was of such unusual proportions that it is my opinion that it does demand some explanation and some thought and some investigation on the part of the proper agency within our government.

While sitting on an open front porch facing the East, my wife and I witnessed several shooting stars. We suddenly observed what appeared to be an airplane flying at an extremely high altitude approaching our house out of the Northeast. This object appeared to have two extreme wing-lights and one light in the center. We continued to assume the object to be an airplane until we suddenly realized that it was no longer moving. The three lights came to a complete stop in the middle of the sky. I know that they were at a complete stop as I related them in the sky to a post on my front porch and observed in this manner for approximately five minutes. After that length of time, the three lights started moving at an extremely high speed in the direction of the Southeast. The lights no longer were fixed in position in relation to the other two lights, but varied slightly in the distance between each other as they flew in that direction. They were obviously three different objects, but they were maintaining an approximate formation as they flew. They did not fly in a completely straight line as an airplane would fly, but they seemed to bounce up and down some what as they varied the distance between each other. They were out of sight in approximately three to five minutes. We were positively amazed.

Our farm is situated on [REDACTED] in Pasco County midway between Brooksville and Dade City.

If it should be within your power to offer some explanation, we certainly would appreciate hearing from you.

Very truly yours,
[REDACTED]

SUBJECT Unidentified Flying Objects (UFO) Sighting

TO AFSC (FTD)
Wright-Patterson AFB, Ohio

1. In accordance with AFR 200-2 dated 20 July 1962 the ensuing report is submitted. Preliminary analysis confirms that the observer - a mature, stable college graduate of sound judgement, sighted some unusual phenomenon which is beyond the scope of this headquarters to satisfactorily explain.

2. Basis data in accordance with paragraph 14, AFR 200-2 follows:

a. Description of the Object(s): A cluster of three "second magnitude", star-like lights which, on approach and during "hovering" maintained a stable relative horizontal formation. Upon departure after hovering, relative positions changed in a "bouncing" manner, as phenomenon increased in distance with decreased intensity from the observer, to ultimately merge into the starry environment of the sky.

(1) Although an unusually clear night, no specific shape configuration could be established.

(2) UFO(s) graduated in subtended size from approximately that of a pin head to the head of a match (at arms length) from initial sighting 20° above horizon, through approach and hovering (about 45° above horizon). Departure variation was substantially similar; all references were corroborated by observer's wife.

(3) Star-like light, of second magnitude order.

(4) Three distinct lights, to form a cluster (formation).

(5) Stable relative positions along horizontal plane at initial sighting, during approach - with an apparent increase in size, and during "fixed" period. Upon departure, relative positions changed in irregularly-controlled manner.

(6) No other distinguishing features visible.

(7) No tail, trail, or exhaust visible.

(8) Relatively still night; but no sound or noise audible relative to sighting.

(9) A definite impression that UFO(s) were under deliberate and complete control at all times.

b. Description of Course of Object(s):

(1) While seated on the front porch of their ranch home, observer and his wife were looking at the unusually clear sky. Perceptible movements of lights, stars, etc., were vividly apparent. Their attention was drawn to the approach of UFO(s), whose movement and actions held their interest.

(2) First observed approximately 20° above horizon, approaching from NE (1 to 2 o'clock position), approaching (growing larger) in straight path toward viewers, gaining elevation to about 45° above horizon where "hover" occurred.

(3) From hover position (1 to 2 o'clock/ 45° elevation), object(s) turned an apparent 90° left from their direction of approach, decreasing in size, intensity, and elevation until lost within the sky's background (toward the southeast from turn-point, at 20° elev.). Relative azimuth at disappearance was approximately 3 - 4 o'clock to original sighting.

(4) Approaching visibly from one o'clock/ 20° elev directly toward viewer during 3 - 4 minutes, then hovering for an appreciable 3 - 5 minutes of time at 1 o'clock/ 45° elev, then moving toward UFO(s)' southeast in an irregular "bouncy" formation. Disappeared at 3 - 4 o'clock/ 20° elevation, merging with background of the sky. Relative size, elevations, and light intensities corroborated description of flight path.

(5) Rapidly (3-5 minutes) in southeasterly direction, toward viewers 3-4 o'clock position. Assuming observer facing North throughout period.

(6) Total time estimated between 11 to 15 minutes.

c. Manner of Observation:

(1) Ground - visual. (20/20 vision, observer and wife).

(2) No optical aids available, or used.

(3) Observer in fixed position on ground.

d. Time and Date of Sighting:

(1) 18/0200Z November, 1962.

(2) Night; unusually clear, with no restrictions to visibility.

e. Location of Observer(s): $28^{\circ}26'N$, $82^{\circ}22'W$.

f. Identifying Information on Observer(s):

(1) [REDACTED] Tampa, Fla.;

successful Wholesale Furniture firm official. Mature, college graduate, former Captain U.S. Marine Corps (4 years). Sober, perceptive, objective individual of sound judgement. Confident and capable demeanor confirms my conviction that source is completely reliable as to credibility and observations. Very reluctant to report at the outset, after much careful deliberation he decided to make the enclosed report. Friendly, cheerful, and willingly cooperative in follow-up investigation. Obviously not given to sensationalism, Mr. ~~Sutcliffe~~ embodies high qualities of character, integrity, and reliability.

g. Weather and Wind Conditions:

(1) Unusually clear night, all stars and movements in the sky were vividly apparent. No clouds, fog, or other restrictions to visibility.

(2) MacDill AFB weather records: Surface - 160/4; 6,000' - 350/10; 10,000' - 230/35; 16,000' - 240/35; 20,000' - 250/35; 30,000' - 240/25; 50,000' - 260/40.

(3) Ceiling - clear.

(4) Visibility - more than 15.

(5) No clouds.

(6) No thunderstorms.

(7) Average vertical temperature gradient was $3/4^{\circ}\text{C}$ per 1000' from surface to 30,000 MSL. (Subsidence inversion existed from 5,000' to 8,000' MSL).

h. None.

i. None.

j. Tampa International Airport (about 20 mi. South of observer) released Radiosonde at 17/2400Z.

k. Position, title, comments of preparing officer: Assistant Base Operations Officer, Major Jack H. Bond. Observer is considered to be completely believable in his sighting. Of well above average intelligence and background, he is well equipped to render objective conclusions with sound judgement and clarity. He obviously sighted some unusual and extraordinary phenomenon, which is beyond our capabilities to explain. Consultation with local FAA, RAPCON, AC&W (manual), Weather, and Navigational agencies reveals no explanation for the nature or identity of the sighting.

Since it is conceivable that certain other agencies in the Southeast U.S. might have knowledge of activities which could account for the phenomenon, information copies of this complete correspondence have been forwarded as indicated below.

April 17, 1963

I wish that some professional observer could have the opportunity to see these objects. May I point out that this past Saturday night, April 13, was again a night of clear skies with hundreds of normal stars in the heavens. We saw only two moving stars this time instead of three. When they stop, they look for all the world like a fixed star in the sky.

From a patriotic point of view, I should like to have a trained observer witness these flying stars, but this would be for you to decide.

Very truly yours,

FLS:gc

COMPANY

Mr. J. Allen Hynek, Director
Dearborn Observatory
Northwestern University
Evanston, Illinois

Your correspondence will reveal that you wrote to me on January 7, 1963, pertaining to my report of a strange sighting in the sky. You asked that I provide additional details, or else phone collect to your home. I attempted to telephone today, but I was told that you were out of the state. After delaying my call for three and a half months, I decided a letter would suffice. Some one at your home supplied the operator with your address in New Mexico, but I decided to write.

I am now prompted by the fact that my wife and I again saw the same "stars" in the same part of the sky, at approximately the same time, while sitting on the same front porch.

These "stars" may be present every night for I do not know, because I have not tried to observe, but let me say that these "stars" are not stars, but are unidentified flying objects that demand some explanation.
