Dear Mr. [REDACTED]

This is in reply to your letter in which you related an observation of an aerial object which you could not identify.

Your letter did not contain enough information for us to establish an identity of the object you observed. However, no association can be established between an object observed and an explosion occurring at a later time.

I am enclosing the current report on Project Blue Book for your information. I hope this will be of interest to you.

Sincerely,

TO: Hq USAF SAFOICC (Mrs Hunt)

1. Reference the attached letter from [REDACTED] requesting information on unidentified flying objects. Records indicate previous correspondence from him in 1964, however, he has not received the 1965 release.
2. The object observed in January 1965 is too old to warrant investigation. However, the apparent path as indicated in his drawing does not show a marked change in direction. Duration and other essential information is missing for evaluation. No association can be established between an object observed and an explosion occurring at a later time.
