Dear Sirs,

Some weeks ago I saw what I thought was an unidentified flying object. I first saw it while I was walking by my friend's house. After watching the object for about five minutes, I knocked on the door of my friend's house. As I was doing this the object disappeared suddenly, even though the sky was very clear. When my friend came out he didn't believe me, but all of a sudden it reappeared at a slightly different position. I asked my friend to get his 80 power telescope out. While he was doing this my family and another one of my friends saw the object. I looked at it through high powered binoculars, and it looked like a whiteish yellow fireball. I would have thought it was a fireball except that it flew in a pattern that a fireball is incapable of flying. That is it flew in a high arc and then zipped along the horizon. As it went along the horizon my friend brought his telescope out, but by the time we got in focus it could hardly be seen. I would like you to tell me what you think it was, and I would gladly accept any information that you can give me.

Yours Truly
