35. Information which you feel pertinent and which is not adequately covered in the specific points of the questionnaire or a narrative explanation of your sighting.

The object appeared to be divided into three sections. The first or upper section appeared to be red, and was the upper half of the object. The lower half was divided into two sections of blue and green. The object radiated light all over the sky, and was very bright.

The moon was in the sky, but it was in three quarters and in a lower portion of the sky.

We were in an open field when we saw the object. We only viewed the under section of the object.

In two of your questions I only roughly estimated the speed and the distance away from the object. In another question (26) I could not think of an object or several when placed in the sky would look like the object I saw. (20, 21)
