Statement, included at Blue Book, to the effect that the "object was not moving except when the witness would travel in the car", is absolutely incorrect; if the witness is to be believed at all. Witness stated that the object suddenly sped up and rushed away and "when it was approaching me it had only vibrant red light that was visible". With respect to the light, witness stated, "there is nothing I know of, or that I've ever seen with red lights that were as vibrant or as brilliant".

Finally, witness became frightened because object appeared so close directly over her car, and yet said there was no sound at all. Unless one is willing to call this an absolute hallucination, and that there was no physical outfit present whatever, the evaluation "aircraft" simply won't hold up.

This case is sufficiently interesting for me to interview the witnesses, as there were two rather than one as stated. They were independent and talked about it only after each had seen it separately.

I will make this personal investigation and report later.

23. 3 April 1967, Roseville, Michigan.

I would agree with the evaluation of possible birds, but I suppose to be fair we should also add, possible unidentified (data insufficient, no followup). The card indicates one object, and the report, however, clearly indicates that 10 to 12 lights were observed flying in V formation. This actually strengthens the "possible birds" evaluation.

24. 4 April 1967, Wheeling, W. Virginia.

This is not in my files.

25. 5 April 1967, Westminster, Colorado

Since the 164 was not returned the evaluation "insufficient data", I suppose, is entirely correct, but the case itself is interesting in that there were 15 witnesses. Here is one case the Condon Committee should have looked into, since it was right at their back door. They should have looked into it particularly since there were 15 witnesses. Also the object was visible for 15 minutes, and it was observed through a telescope. Even at this late date this might be worth a call. As a matter of fact, when I am in Boulder this July I will look into it myself, but for the statistics, the evaluation "insufficient data" certainly holds.

I was visiting my neighbor across the street that night and when I came out of the house, I heard a noise in the distant. I didn't pay any attention to it until I approached the driveway of my home. I turned around and looked when the noise seemed to be coming closer overhead. When I first saw it I couldn't define any shapes until it was almost directly overhead. Then it was very clear and the noise was clearly audible. I hope the information I have supplied can be of some help. I have answered the questions as clearly as I can remember and to the best of my ability.

P.S. When I left my neighbors it was a couple minutes before 10:30
