Proposed reply to [REDACTED] (Sighting: July 26, 1967)

Dear Mr. [REDACTED]

This replies to your recent letter concerning your observation of an unidentified flying object on July 26, 1967.

Investigation has revealed that you probably observed the planet Venus. At approximately 9:30 pm, EDT, on July 26, 1967, Venus would have been on an azimuth of 275 degrees, at an elevation of eight degrees.

You stated, ". . . Venus at this time of the year is not even close or even on the horizon line." According to the American Ephemeris and Nautical Almanac 1967, Venus set at approximately 10:00 pm, EDT on July 26, 1967. Thus, the planet would have been near the horizon at 9:30 pm EDT.

You also mentioned that when viewed with binoculars the object at first appeared somewhat fuzzy or blurred. This is normally expected since the images formed by binocular lenses often show spherical aberration.

Thank you for reporting your observation to the Air Force.

(Actn of Venus)

Sirs;

The many books I have read say that when you see a UFO to report it. Well this is what happened. I am using a copy of your questionnaire.

0130Z 27 July 67

I saw the object July 26, 1967 at close to 9:30pm Daylight Saving time. The time zone was Eastern. I was at the address above. The object was in sight some 15min. Which is just a guess. It seemed that long. The object was in sight all the time. The condition of the sky was NIGHT; a. Bright there were no stars at that time. There was a clear sky the weather was dry. The object appeared as a light. The object was so bright I at first thought it was Venus but as anyone knows Venus at this time of year is not even close or even on the horizen line. At first glance appeared as a very bright star and when I put the Binoculars on it, it was fuzzy or blured and as I kept watching it became more clearer and looked to have something close to it. The object looked to stand still and change brightness, it looked to give off a lot of that angle hair you use at Christmas, but this was silver or gray color. Then a red ball of light left the main part of the object and went to the North West. Then there were silver small about the size of pin heads objects near the Angle hair like material. There 3-4 of these small objects there. Then they seem to move up and away at a good speed. Much faster then the red ball object did. As I said before there were no clouds in the area at the time. There was no sound to the object or later objects. You ask to try that experiment with a match. It was big enough that a dime would just cover it. I would say that the object had to be at least 5,000 feet or more. I am an amature astronomer and was on my skywatch as usual I speend up to , two hours and some times more out at night. I have been with astronomy now 10 years. The object was at 90 digrees right overhead. If I had had a 35mm camera you would have some good pictures with this sighting.

No. 32. Please give information about yourself:

NAME [REDACTED]

Address [REDACTED] Pittsburgh 32, Pa.

Telephone- None Age 21 Sex Male

I have seen satilights all kinds of jets at all hights all types of Aircraft. I have seen metors and as I said before I have been with Astronomy for ten years.

I reported the sighting the same evening

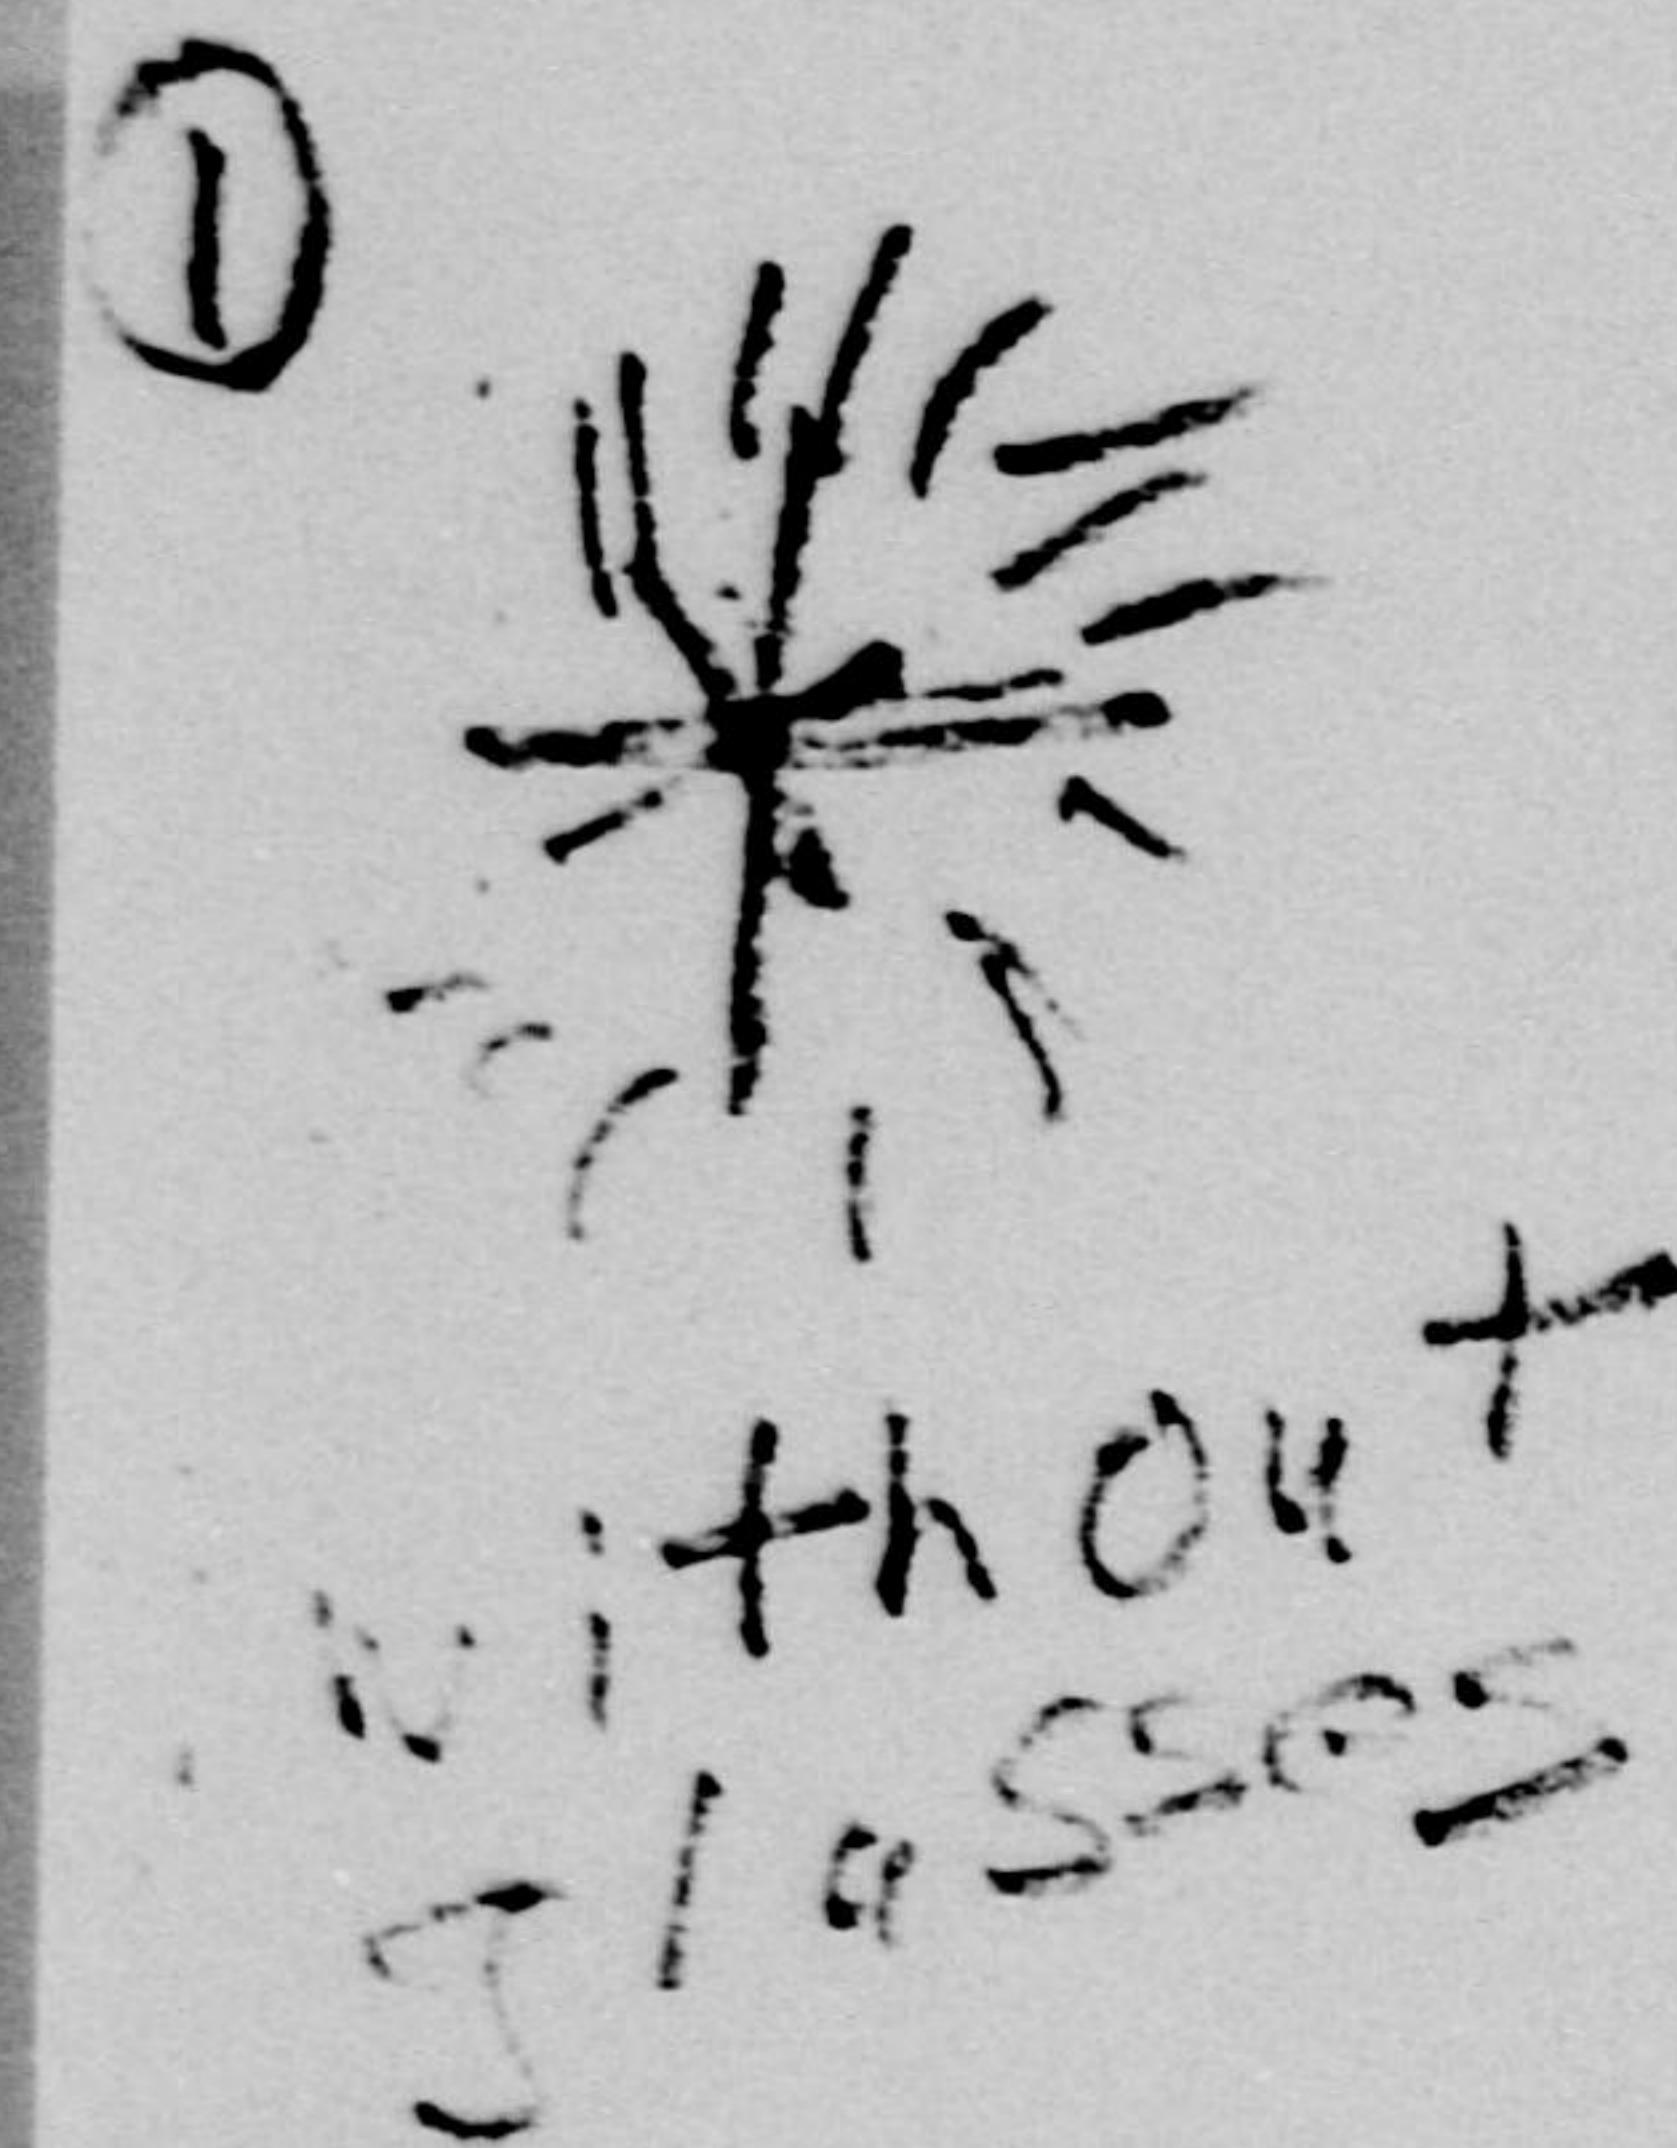

First I called the Aleganey AirPort tower (control)

Next: I called the Pittsburgh Press and ask if anyone had reported an object they said no.

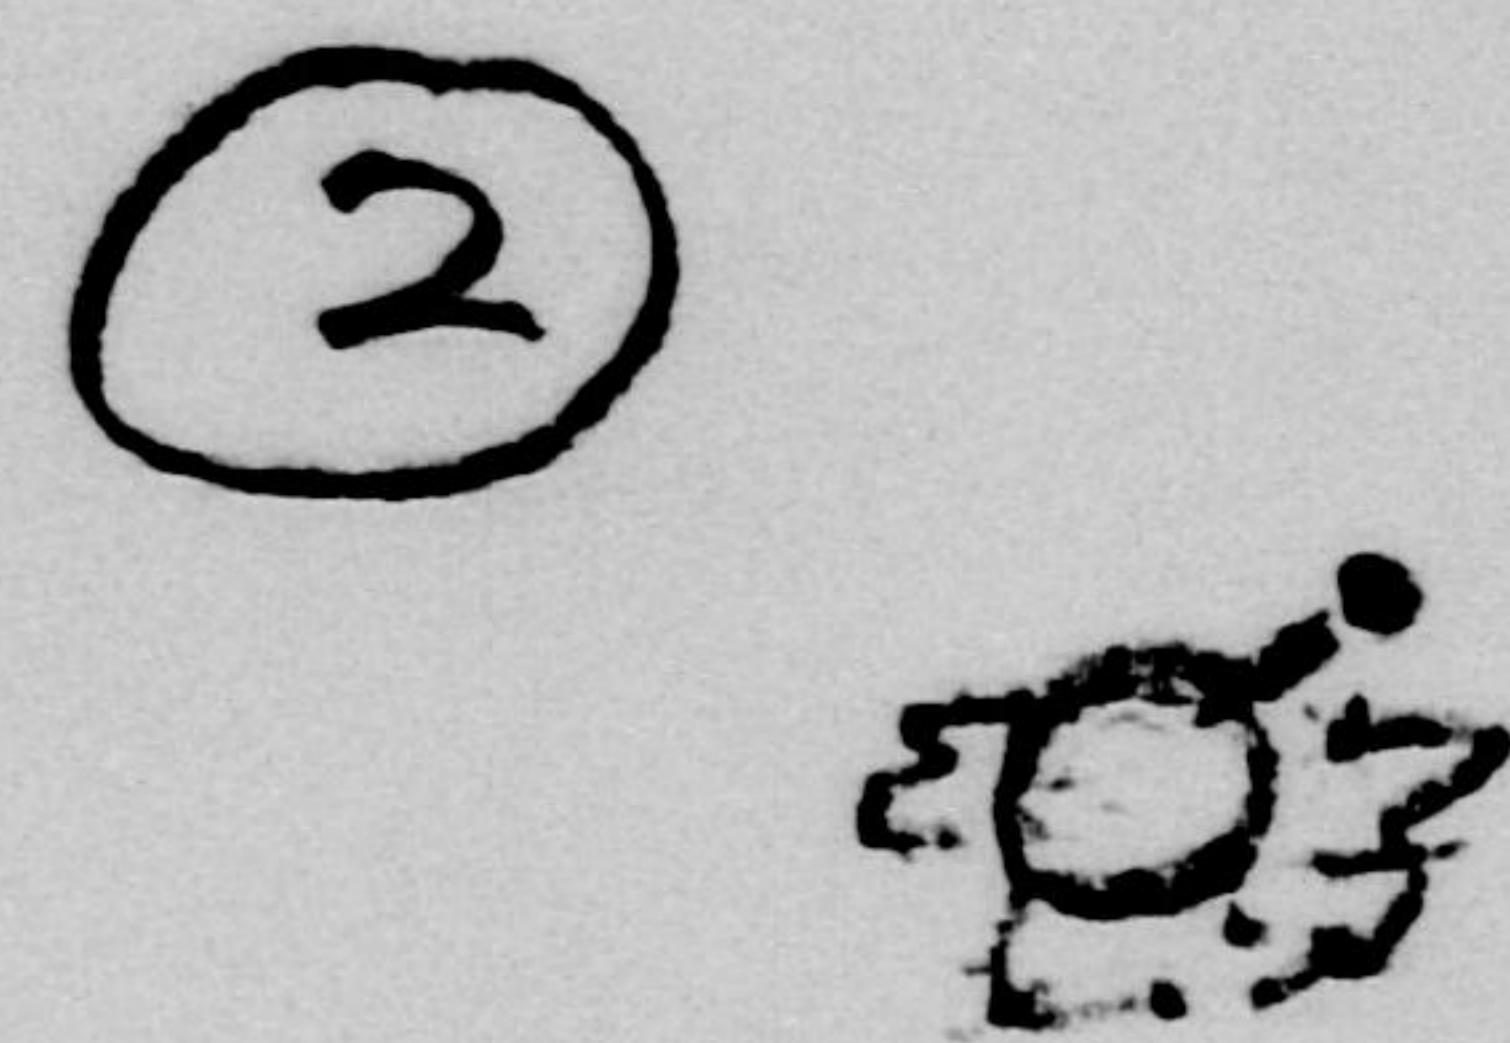

Next I called the Bauhl Planetarium which they in turn gave me a story about a weather balloon. Now I ask you sence when does a whather ballon act like this did.

I hoped I have helped in some way with this report to you.
