1. Reference your unidentified observation and subsequent photographs of 7 July 1967. Photo analysis has been accomplished with the following results:

a. Examination reveals that the "unidentified object" is partially visible along the left margin of the negative, and that the imagery is not the result of double exposure or retouching. The object is not visible in its entirety due to the fact that about 1/5 inch has been cropped from the left margin of the negative. The object appears to be symmetrical and it therefore could be assumed that about 80 percent of its imagery remains. Also imaged is a TV antenna which extends from the center of the bottom edge of the negative almost to the center of the format. Source indicates the antenna is attached to his neighbor's house.

b. The object's image is eliptical in shape, its length being about twice its width. It displays medium reflectivity and is fuzzy around the perimeter. A narrow band displaying slightly greater reflectivity is positioned along its minor axis. No reason or purpose has been established for this change in tone.

c. The exposure was made with a fixed focus camera having a nominal .26 foot focal length lens. Source states that the object was 100-200 feet in diameter and hovered about 200 feet above his neighbor's house at the time he made the exposure. The clarity of detail and relative size of the antenna indicate that source was perhaps 75 feet from his neighbor's house and not more than 220 feet from the object as it hovered 200 feet above the house.

d. If, indeed, the object had the 100-200 foot diameter (as stated by source) it would have had to be 800-1,600 feet from the camera to

TDPT (UFO) OFFICIAL FILE CY

produce the image size shown, and therefore would be in relatively sharp focus. Contrarily, if it were hovering 220 feet from the camera, its diameter would have to be approximately 30 feet to produce the image size shown, and it would also be in sharp focus.

e. The object imaged on the photograph, not being in sharp focus, could not have been hovering, and does not appear to have dimensions as great as those estimated by source.

f. Although the object on the negative cannot be identified, it appears to be circular in planform and situated between the camera and antenna. Its diameter is estimated to be 1 to 1.5 feet at a range of approximately 15 feet.

2. We are returning your original negative and photograph. Thank you for reporting your observation to the Air Force.

Greg states this U.F.O. came out of the east in area of old airport. Greg further states this vehicle hoovered for a short time and departed to the west faster than a jet aircraft. The craft was estimated in size at 100 to 200 feet in diameter if on the ground. Color is yellow. Greg states it was lower than an inflight air craft.

The photo was taken with box camera number 620 black and white Koda film and processed by Ideal Photo. There are no adjustments for le or speed on the camera. Greg was told to submit the photo to Wrigh Patterson, Air Force base for review.
